ATSCOIN - Decentralised B2B Ecosystem for Global Trade

ATSCOIN is building the infrastructure to transform international trade by combining blockchain, traditional finance and Web3 tools. Mission: to remove barriers in the B2B sector through:

- Cross-chain payments (Polkadot, Ethereum, BSC) for instant settlemen
- Flexible payments: support USDT, SWIFT transfers and bank payments for business convenience
- Fixed returns of 8-15% on commodity pool investments
- 0% transaction fees on the marketplace

Market Challenges

For businesses

- High commissions of up to 30% on traditional trading platforms
- Difficulties with international payments: SWIFT delays, high bank commissions
- Lack of mechanisms for small wholesale purchases
- Risks of default in international transactions

For investors

- Limited access to investments in real assets
- High volatility of the crypto market
- Complicated procedures for entering international markets

Solution: Three-Part Ecosystem

B2B Platform ATS.Market

Subscription instead of commissions

Flexible tariff plans (monthly/annual) paid in ATSCOIN

Commodity pools

- Large suppliers can split their shipments into liquid NFT shares
- Buyers purchase shares in pools, which lowers the minimum entry threshold
- Dynamic pricing based on supply and demand
- Possibility to resell shares on the secondary market

Wholesaling "in the fold"

- SMEs (Small and medium-sized enterprises) join pools for joint purchases
- The platform automatically aggregates demand and finds suppliers with the best conditions
- Participants get access to large wholesale prices when purchasing small quantities.
- All transactions are protected by smart contracts with escrow

How the joint procurement model works

1. Buyers form a combined order through the platform
2. The system automatically finds the supplier with the best price
3. Smart contract locks funds in escrow
4. The supplier ships the combined batch
5. The product is distributed among the pool participants

ATS.Finance Investment Platform

Asset Tokenisation

- Commodity assets (coffee, metals, electronics)
- Enterprise assets (shares in companies, equipment)
- Real estate and infrastructure projects

Yield

- 8-15% p.a. in ATSCOIN (premium rate)
- 5-10% p.a. in USDT (stable rate)
- 20% of pool commissions are burned, creating deflationary pressures

Pool Creation

- Pool initiator pays commission in ATSCOIN
- Automatic verification of assets via oracles

Technology Infrastructure

Multi-lingual AI assistant

- Real-time negotiation translator
- Contract analysis and risk identification

Smart Contracts

- Automated escrow accounts
- Smart delivery contracts linked to IoT sensors

Decentralised storage

- IPFS for documents and certificates
- NFT product passports with movement history

Multichain support

- Ethereum, Polkadot and BSC interoperability
- Universal bridges for cross-chain transfers

CRYP2NOVA

ATSCOIN Tokenomics

100% — 210 000 000
Fixed Supply | Fully Circulating

Tokenomics of the ATSCOIN project

- Burning: 20% of subscription fees are destroyed, creating a deflationary effect
- New Token Issuance: Not possible
- Account locking: none
- ATSCOIN is a digital asset with a fixed supply and transparent tokenomics. Token burns and team token lock-up ensure deficit and value growth. Join the ecosystem where technology works for your success!

Security and Regulatory

- KYC/AML: Verification of all platform participants.
- Smart contract auditing: Open reports on atscoin.io.

Partnerships for Security

- ZARIOT: Securing IoT devices in supply chains 10.
- Chainlink: Oracles for real-time commodity price verification 4

Partnerships and Cases

ATS Finance

- Integration with traditional financial institutions
- Ability to tokenise assets of banks and funds
- Joint products with crypto exchanges for liquidity

Technology Partners

- Cross-chain interoperability
- Oracles for price data
- IPFS decentralised storage

Logistics alliances

- Partnerships with international carriers
- Integration of shipment tracking systems

Benefits for Participants

- Suppliers: Risk-free sale of large quantities through pools + 40% cost reduction.
- Retailers: Collaboration with retailers to use ATSCOIN for bonuses and discounts.
- Investors: 12% return in tokens + rate hike due to deflation.
- Buyers: Access to wholesale prices for small businesses.

Conclusion

ATSCOIN is creating a standard for the next generation of B2B commerce

A decentralised, secure and cost-effective ecosystem where technology works for business, not the other way around.
