Overview

Bio is a new financial layer for funding and developing early-stage biotech. Our mission is to reshape how biotech breakthroughs are born by enabling global communities of patients, researchers and crypto users to create user-owned research networks that fund and develop new and emerging biotechnologies from day one.

At its core, Bio is designed to help scientists raise funds for their research, create value from that research, and capture and distribute that value via commercial successes.

By breaking down traditional biotech barriers and introducing a permissionless framework, Bio can accelerate life-saving discoveries while making them more accessible to all.

Get Familiar with Bio

- **Concepts** - Learn the core concepts of the protocol.
- **DeScientists** - Your guide to participating in the ecosystem.
- **Developers** - Learn how to build on the Bio Protocol.
- **Governance** ↗ - Participate in our community governance process.
- **Security** - Review our audits and security resources.

Explore the Ecosystem

- **Bio App** ↗ - Discover and participate in new project launches.
- **Dashboard** ↗ - Explore DeSci markets and track project performance.
