Bitcore Whitepaper

Abstract

1. What is Bitcore? – Overview:
Bitcore is a cryptocurrency born during the peak of the Bitcoin scaling debate in April 2017. It tackles both the SegWit and bigger blocks question by using 10 MB blocks, having SegWit integrated and running with a block-time of only 2.5 minutes.
The project is called Bitcore and uses BTX as its abbreviation.
It can be GPU mined featuring an ASIC repellant algorithm.
Released by the talented developers of Bitsend.
Free and fair distribution via claiming and airdrops.
No ICO!
running stable for five months now
