🎰 Welcome to Bitdealer

Copy

Executive Summary

99.9% of meme tokens fade away shortly after launch. The rare few that endure, like Doge, Shiba, and Bonk, did so because they found ways to build real communities, strong narratives, and long-term utility.

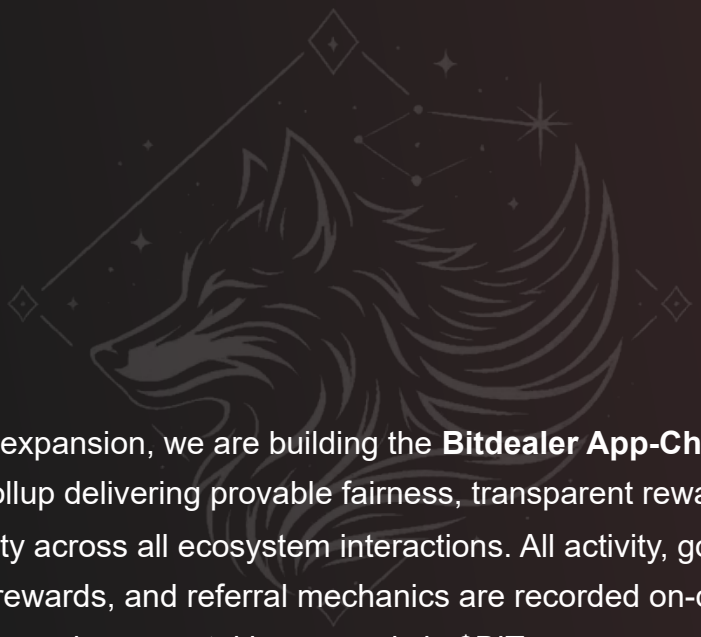

Enter **Bitdealer**, the first **asset-backed meme launchpad.** Unlike traditional meme tokens that rely purely on hype, each token launched through Bitdealer is paired with real, game asset that drive liquidity, trading depth, and community adoption. These token pairs are structured to create sustainable market activity and deflationary supply dynamics, ensuring long-term potential rather than short-lived speculation.

To power this ecosystem, we are launching with the direct strategic backing of **Meteora and Jupiter**, making Bitdealer an official launchpad partner. This collaboration gives every token launching on Bitdealer unrivaled, day-one access to liquidity through immediate listing and integration with leading trading terminals such as **Axiom, Photon, bullX, Trojan, Bonkbot,** and of course **Jupiter.**

Inspired by the success of “Virtuals” in the AI Agent space, Bitdealer introduces **Meme token pairs**, each liquidity-paired with **$SOL & $BIT**, tradable on DEXs and across our platform. This creates a scalable flywheel of liquidity, speculation, and community-driven growth for every new Token launched.

At the core of this ecosystem lies **$BIT** — the native token of Bitdealer. $BIT is **not connected to gambling, iGaming, or Revenue buybacks.** Instead, it powers governance, staking, DEX liquidity, and ecosystem utilities across the Bitdealer platform. As the network expands, $BIT becomes the backbone for growth, ensuring alignment and interoperability across all launchpad projects.

To support this expansion, we are building the **Bitdealer App-Chain**: a purpose-built rollup delivering provable fairness, transparent rewards, and full on-chain visibility across all ecosystem interactions. All activity, governance votes, liquidity rewards, and referral mechanics are recorded on-chain, secured by node operators who earn staking rewards in $BIT.

Bitdealer is redefining how meme tokens are created, launched, and scaled, decentralizing ownership, aligning incentives across communities, and transforming digital culture into sustainable Web3 assets.
