Reclaiming Economic Power: The BLCKCoin Mission

Black culture has shaped sports, music, fashion, and other forms of art in the world today. Despite this worldwide cultural influence, the Black community has not received a fraction of the benefits that they're owed, and this is not fair.

It's time to redistribute this wealth back into our communities and give the Black people what they deserve. That's what BLCKCoin is all about. BLCKCoin is a project that will generate hype and viral sensations across numerous platforms. Using the influence brought by the hype, this project will give back to the Black community.

Archived copy · cryp2nova.com

BLCKCoin will use cryptocurrency to make possible what would have been impossible relying on government institutions that don't care. The BLCKCoin mission is to build a comprehensive ecosystem that will support the tokenization of real estate properties, music royalties, and artistic works, creating multiple pathways to wealth generation.

Our real estate initiative will acquire foreclosed properties, renovate them, and convert them into NFT-backed assets where original homeowners retain partial ownership. The rental income from these properties will flow back to token holders and community members through smart contracts, creating passive income streams while addressing housing insecurity.

Simultaneously, our digital rights marketplace will allow Black artists and creators to tokenize their work, ensuring they receive fair compensation through automated royalty distributions.

BLCKCoin represents a holistic approach to economic justice—combining the power of cryptocurrency, NFT technology, and community governance to build sustainable wealth within the Black community. With its transaction tax, BLCKCoin will generate billions of dollars in daily trading volume, similar to the biggest memecoin projects. This revenue will fund Black-owned businesses, education for the people, and homeownership dreams for years to come. BLCKCoin will become the driving force that will improve poverty across Black America and bring about huge economic success.

Core Mechanics: How BLCKCoin Works

BLCKCoin is a cryptocurrency project that’s designed to benefit the Black community by leveraging the power of transaction tax. Transaction tax is the primary funding mechanism of the BLCKCoin ecosystem, so each movement of tokens contributes to aiding the Black community.

The transaction tax on this platform is 2.5% of the total amount being transferred. This means that only 97.5% of each transferred BLCK token gets to the other end.

The types of transactions that are taxed on this platform include:

- Transfer of BLCK between wallets
- Addition and removal of liquidity
- Claiming liquidity and staking rewards
- Buying and selling BLCK tokens on decentralized exchanges

Archived copy · cryp2nova.com

- Distribution of rewards and pool tokens

Distribution of Transaction Tax

The 2.5% transaction tax that's collected on every transfer of funds is split into the following portions:

- **1.5% to the community reinvestment pool**: This is the primary path of the transaction fees.
- **0.5% to staking pool**: This portion is used to replenish the staking pool.
- **0.5% burned:** This portion of the transaction tax is burned to reduce the circulating BLCK supply and increase the value of the remaining tokens.

Grants

The community reinvestment pool is used to mainly fund Black community initiatives through grants. These initiatives are selected through the BLCKCoin governance system, where everyone gets a chance to vote. Grants can be awarded for initiatives like:

- Down payments for homeownership
- Black-owned entrepreneurship ideas
- Black-owned business startups
- STEM scholarships

Can you imagine what it would be like when BLCKCoin starts to generate daily trading volumes comparable to coins like Dogecoin and Shiba Inu? If this coin generates a $200 million daily trading volume like Shiba Inu, the community wallet would grow by $3 million in a day. In a month, the wallet will grow by $90 million, and in a year, the increase could go as high as $1.095 billion.

With a modest 1.5% transaction fee, BLCKCoin can create more than 21,900 new Black-owned businesses each year, even if their start-up capital were as high as $50,000. If these funds were invested in homeownership, over 54,750 people could have new homes in a year, even when $20,000 is set aside for everyone's down payment.

CRYP2NOVA

Archived copy · cryp2nova.com

The BLCKCoin ordinary 1.5% transaction tax can also cover the scholarship tuition for over 109,500 students every year, assuming tuition costs $10,000. The job training programs that will be supported with these grants will upskill thousands of Black people, leading to increased wages and reduced poverty levels.

Merchants

This is the second purpose of the community reinvestment pool. BLCKCoin will support all Black-owned business merchants and retailers. In return, these businesses will accept BLCKCoin as a medium of payment.

Doing this makes BLCK useful as a real-life medium of exchange and opens up a path for more usage of the coin. This network will also work together with businesses to make the process of integrating BLCK as a medium of payment a seamless one.

Building Value: Staking System and Rewards

BLCK token holders are free to stake their coins on this platform for rewards. However, staking is only possible when the number of tokens is up to a certain amount.

The amount of tokens that users contribute to the staking pool determines the type of rewards they'll receive. All staking pools also emit a fixed daily reward to all those pooling their resources together, based on their stake. The amount of daily rewards is also proportional to the size of the staking pool.

Benefits of Staking to the BLCKCoin Network

Staking BLCK aids the BLCKCoin ecosystem in many ways, such as:

- **Demand creation:** Locking BLCK tokens up in the process of staking reduces its circulating supply, increasing demand. Users who wish to take advantage of the rewards of staking will also purchase more tokens, reducing their supply.
- **Attract early users:** The prospect of earning more BLCK from locking up tokens will attract many users to the platform.
- **Reduces sell pressure:** The earning potential of staking will make many users lock their tokens, reducing the urge to sell it.
- **User retention:** Locking BLCK ensures that the owners of the coins stay interested in the BLCKCoin project.

Archived copy · cryp2nova.com

- **Controlled inflation:** Locked tokens are unlocked in a controlled manner, gradually reintroducing the tokens back into the network, reducing the chances of inflation.

Types of Staking

Members of the BLCKCoin community have two paths to follow when staking their tokens, and they are:

Single-Sided Staking

Here, users stake BLCK into a token staking contract, and the contract will return a fixed daily reward according to the amount they stake. The daily rewards depend on the size of the staking pool and can grow or shrink depending on the size of that staking pool.

Liquidity Pool Staking

In this case, users enter a staking contract to fund the liquidity pool for decentralized exchanges that will list BLCK. These third-party liquidity providers will be rewarded when liquidity pool shares from the decentralized exchange are deposited into the staking contract. When this BLCK is paid back into the liquidity pool, everyone is rewarded based on their contribution to the staking pool.

Staking Tiers

Members of the BLCKCoin community can earn extra funds from liquidity staking when they meet the minimum staking requirements. All they need to do is stake their token balances. The token enhancements that come with this depend on the amount of tokens in the user's account:

The three tiers in the BLCKCoin staking system are:

- Silver
- Gold
- Diamond

Staking Tier	Minimum Number of BLCK	APY Bonus

Archived copy · cryp2nova.com

	Tokens	
Silver	10,000	+5%
Gold	25,000	+10%
Diamond	100,000	+20%

Staking Bonuses

Besides the daily rewards, BLCKCoin rewards all long-term stakers for their commitment. The longer users lock up their tokens, the better the rewards.

The table below offers a better explanation of this concept:

Lock Duration (Weeks)	**APY Bonus Multiplier**
0	1x
13	1.25x
26	1.5x
39	1.75x
52	2x

Token Structure: Distribution and Growth Strategy

The BLCKCoin ecosystem is powered by BLCK, an ERC-20 token that's minted on the Base L2 blockchain. This Base L2 blockchain was chosen for its high throughput, easy accessibility, low cost, and usage of the existing architecture.

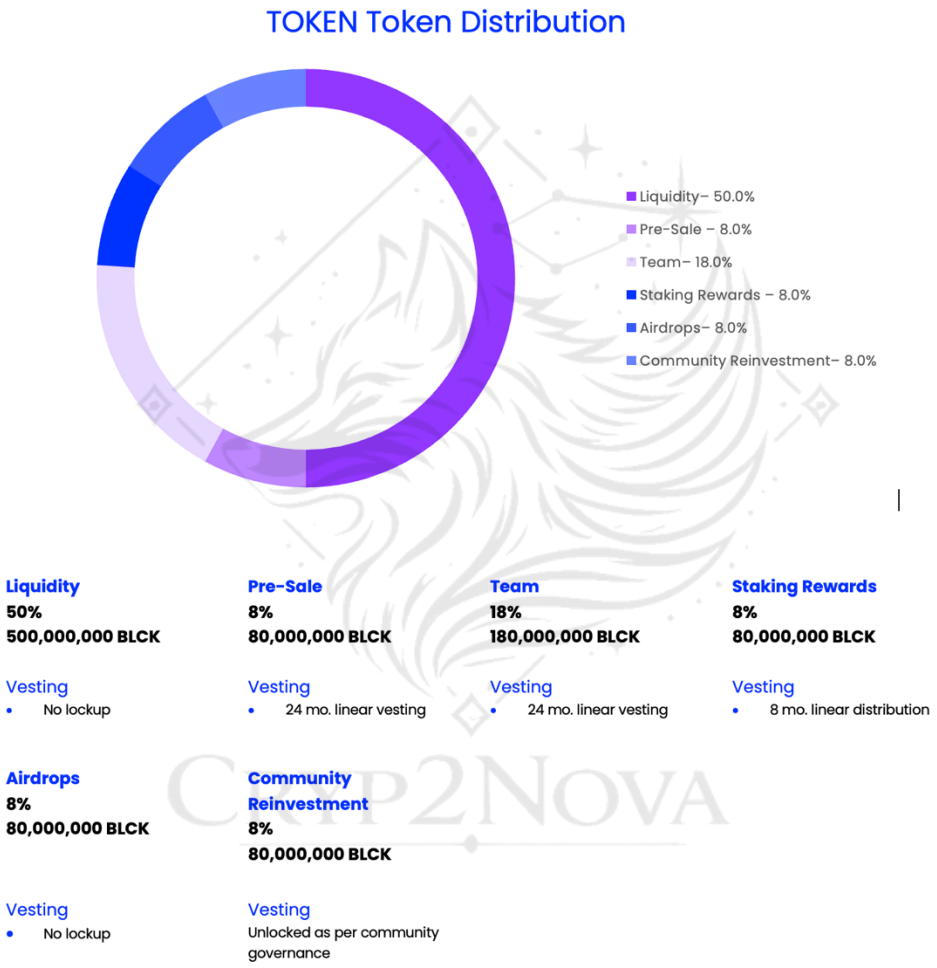

BLCK will be launched through a decentralized listing for fairness. This means there will be no investor or VC allocation and no launchpads on centralized exchanges. BLCK will be listed on Uniswap through a liquidity pool.

At launch, the BLCKCoin team will provide the seed capital and initial liquidity of $25,000 in USDC against the 500 million BLCK tokens. This will give this token an initial

Archived copy · cryp2nova.com

market cap of $50,000 or $0.0001 per BLCK. After the formation of the liquidity pool, the tokens will be burned to ensure the team cannot remove the initial liquidity from the staking pool.

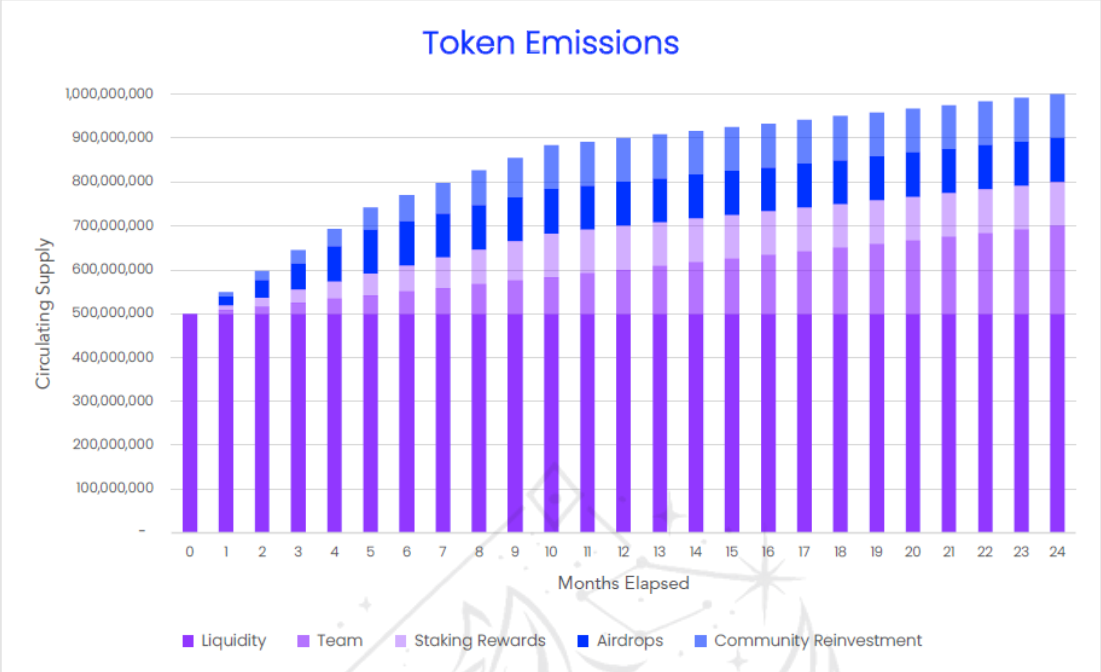

For contributing to the initial liquidity of the platform, the BLCKCoin team will be given 18% of the token allocation. However, these tokens will be locked and invested for two years first to prevent any early withdrawals. The remainder of the unlisted tokens will be used for community reinvestment, airdrops, staking, and other incentives.

Emissions Schedule of BLCK Tokens

To ensure the gradual release of BLCK into the circulating supply, the tokens will be distributed over a vesting schedule. This release will occur over the course of 24 months based on the emissions schedule shown below:

Archived copy · cryp2nova.com

Emissions assumptions made on Staking Rewards for illustration purposes. Actual emissions may vary based on governance decisions and airdrop claims.

Token Acquisition Channels

There are three methods to acquire BLCK tokens for anyone who's new to the BLCKCoin ecosystem.

1. Bounties

To create hype and garner interest, BLCKCoin will offer a limited amount of BLCK tokens to its community. These coins will be delivered on a first-come, first-served basis to all those who perform a series of bounties. The bounties are simple tasks like sharing this project with friends, registering their contact details, and following BLCKCoin on social media.

2. Token Sale

After the round of bounties, there will be a token sale period during which private investors can acquire this coin. Select public buyers can also purchase BLCK through launch pads and specific retail partners. During this token sale period, BLCK can only be acquired through these channels and cannot be purchased directly.

Archived copy · cryp2nova.com

3. Exchanges

After BLCK has been listed on centralized and decentralized exchanges, anyone who's interested in the project can then purchase the coin.

NFT Integration

At the height of BLCKCoin's success, this project will integrate NFTs into its operations. BLCK token holders will be able to mint NFTs out of real estate and buy back underappreciated Black music and art. Simultaneously, our marketplace will allow Black artists to tokenize their work, ensuring they receive fair compensation through royalties.

The NFT integration will start with creating viral sensations and hype about Black cultural movements. This will create hype, allowing BLCKCoin to generate revenue from transaction fees.

With this income, BLCKCoin's real estate initiative will convert foreclosed properties into NFT-backed assets, allowing homeowners to retain partial ownership. Community members and token holders can also support this initiative through smart contracts, and earn passive income streams from it.

Community Power: From Centralized to Community-Owned

All BLCK coins are governance tokens that allow token holders to participate in the decision-making processes on this platform. The votes run through a 3-step process before any decisions are taken, and these steps are:

- **Step 1:** Initial solicitation of interest on the BLCKCoin community forum
- **Step 2:** A consensus vote that comes as a BLCKCoin improvement proposal
- **Step 3:** Implementation

The governance function of this platform won't be fully available at the start. It will be rolled out in a 3-phase pattern as shown below:

Archived copy · cryp2nova.com

Phase 1: Fully Centralized

All proposal-making processes will be performed by the BLCKCoin board. At this point, only token holders with a stake of at least 1% of the total BLCK supply will be allowed to vote.

Phase 2: Partial Decentralization

At this point, users with 10,000 or more BLCK coins will be allowed to participate in the voting process. Nonetheless, the board still retains the power to veto the decisions made. However, the power of executing proposals is split between individuals assigned by the proposal makers and individuals assigned by the board.

Phase 3: Full Decentralization

At this point, everyone gets to vote and pitch in when it comes to making proposals. A special council will be in place to review all proposals to make sure they don't violate any governance rules.

Path Forward: Strategic Milestones 2025-2027

Q2 2025: Release and Team Expansion

Token and listings

- Uniswap release

Get listed on additional DEXs

Marketing

1. Build partnerships with Black social media influencers and outlets

2. Build partnerships with crypto influencers

3. Release the first season of BLCKCoin show. Make additional content oriented towards securing partnerships within the Black entertainment world

4. Create TikTok campaign for startup business founders

CRYP2NOVA

Archived copy · cryp2nova.com

- Build a video production team, actors, etc.
- Liquidate pre-allocated token

5. Start production on the second season of the TV show

- Writing
- Build an animation team

Technology

1. Hire a CTO

2. Build a dApp focused around community voting towards projects

KPIs

Market cap 30-40 million range

Token Allocation

8% from the charity reserve for show expansion and the initial charity

Q3-Q4 2025: Formation of Charity Team and App

Charity Wallet and Non-profit Formation

Hire people to govern the corporation overseeing charity funds

- Business development team
- Scholarship committee and education committee
- Housing committee

Technology

1. Release dApp around community voting

2. Build a staking platform (APY determined by tokenomics + 0.5% transaction fee)

Archived copy · cryp2nova.com

Partnerships

Secure partnerships with Black-owned businesses

Marketing

1. Build partnerships with Black social media influencers and outlets

2. Build partnerships with crypto influencers

3. TV show expansion and content expansion

- Season 2 production
- Showcase early success stories
- Community and seasonal giveaways

4. Branding via merchandise, clothing

Exchange Listings

Apply for CEX: Binance, Coinbase, kraken

KPIs

Market cap: 75-200 million

Q1-Q2 2026: Global Expansion and NFT Integration

Technology

NFT integration

1. Create a marketplace for art and music

- Form a department that will buy digital rights to Black media for NFT minting
- Start with underappreciated or rarer assets

2. Formation of a legal and strategy team for real estate into the NFT pilot program for affordable housing

Archived copy · cryp2nova.com

Legal

Ensure SEC and global crypto compliance

Marketing

Content expansion

- Additional BLCKCoin show, business startup, and scholarship follow-up
- Community projects
- Influencer partnerships

Merchant Adoption

Build partnerships with Black-owned businesses

KPI

200-500 million market cap

Q3-Q4 2026

Global Festival Tour

1. Start a festival tour around the US as well as Nigeria, Brazil, Ghana, and South Africa

2. Tickets purchased with BLCKCoin

Real Estate Pilot

1. Begin acquiring foreclosed properties for NFT-based affordable housing

2. Build out an NFT marketplace for real estate

Charity and Community

1. Expand scholarship programs and business incubators

2. Show real-world impact via documentary

CRYP2NOVA

Taylor Hill: 3D/2D animation engineer

Real-World Impact: Creating Lasting Change

BLCKCoin is more than just a memecoin; it is a movement coin, the first of its kind. This coin has the potential to not only fund Black communities but also to inspire worldwide growth and adoption. 1.5% of the transaction tax will fund STEM scholarships and promote Black entrepreneurship through business grants.

BLCKCoin will fund Black-owned businesses with the condition that these enterprises accept BLCK as a form of payment. Doing this will increase the spending capability for members of this network and improve the utility of BLCK. As this project progresses, NFTs will be integrated to create a marketplace for Black culture-inspired music and other art forms. Real estate acquisition will also be made easier with the integration of NFTs into the BLCKCoin network, creating affordable housing schemes.

This project has the potential to generate billions as annual revenue from its transaction fees. These funds can have huge long-term effects when invested strategically.

There will be a chain reaction of impact on all Black families, greatly reducing the poverty levels of the Black community. It can also increase homeownership, boost entrepreneurship, and significantly improve economic mobility. As this development goes on in the US, BLCKCoin will also be able to reach out to Blacks in Africa and countries in the world.

While BLCKCoin is intended for the development of Black people, you don’t have to be Black to own one. Anyone who supports this initiative and believes in our interconnectedness as a species is welcome to buy.

Archived copy · cryp2nova.com

The more you buy BLCK, the larger the community funds, and the greater the impact this movement will have. BLCKCoin is a project that can make many entrepreneurial pursuits a reality. It can easily fund the development of a movie, start an airline, create architectural and real estate firms; the possibilities are endless. BLCKCoin is the first of its kind, and would bring about a major empowerment for the Black people that will be immortalized forever in history.

Join the BLCKCoin movement and purchase BLCK today!
