1. Executive summary

$BGoat (BGOAT) is a community-driven meme/utility token deployed on BNB Chain (BEP-20). It aims to combine culture-first community growth with pragmatic token utilities (staking, governance, grants, marketplace privileges) and transparent on-chain controls. The contract is

Archived copy · cryp2nova.com

verified on BscScan and used across major BSC DEXs, with active social channels guiding community engagement.

2. Key on-chain facts (live snapshot)

- Contract (BEP-20): 0x88883075fb050f4199cF7b2011cC15f1c966403f

- Total supply (on-chain):
  1,000,000,000 \$BGOAT (1 Billion).

- Contract status:
  Verified source code on BscScan.

- Holders (snapshot):
  2,000 holders (public snapshot; on-chain number may change).

- Transactions:
  >1,500 txs recorded on the address page (live count may vary).

- Active trading / pair explorers:
  token seen on PancakeSwap / DEX aggregators, DEXTools and Poocoin charts.

3. Vision & mission

- Vision: Anchor a culturally resonant community token on BNB Chain that rewards culture-creators and community stewards while providing tools for creators to monetize and grow.

- Mission: Deliver a token ecosystem that’s safe, transparent, and community-run — moving beyond pure speculation toward utility (creator grants, staking rewards, DAO governance, reputation mechanics).

4. Market opportunity & problem statement

- Meme / community token markets retain high engagement but often lack sustainable utility.

- Creators and micro-communities need accessible funding, on-chain reputation signals, and low-friction monetization models.

Archived copy · cryp2nova.com

- Scam/impersonation risks on chat platforms lead to user losses; token projects must adopt clear verification and admin rules.

$BGoat addresses these by combining on-chain transparency, a DAO-controlled grant pool, staking mechanics and standard community safety guidance (e.g., admins never ask to DM, official channels and verified bots).

5. Product & ecosystem overview

Core components:

- On-chain token (BEP-20): currency, governance, staking.

- Staking module: reward long-term holders with protocol/fee shares (future implementation).

- DAO / governance: token-weighted proposals to allocate grants, change parameters, or approve strategic partnerships.

- Creator grants: funded from a portion of tokens and protocol fees to support creators and community projects.

- Marketplace / perks: holders receive marketplace credits, fee discounts, verification badges inside community channels.

Design goal: start lean, deploy token + liquidity, enable staking and a small grant program, then progressively decentralize to a DAO.

6. Technology & security architecture

- Chain:
  BNB Chain (BEP-20), Low gas, fast finality, large DeFi ecosystem.

- Contracts:
  Verified token contract (BscScan). Future modules (staking, governance) will be separate contracts with independent audits.

- Treasury controls:

Archived copy · cryp2nova.com

Multi-sig wallet for treasury movements, timelock for large disbursements, public on-chain transparency.

- Operational safeguards:
  Bug bounty, audits before major feature launches, responsible disclosure policy.

7. Tokenomics & supply mechanics

- Token:
  $BGOAT (BEP-20)

- Total supply:
  1,000,000,000 BGOAT (fixed on contract).

- Recommended allocation (on-chain distribution to be confirmed by team):

- Community & Liquidity:
  40% (400,000,000), liquidity pools, airdrops, community rewards.

- Ecosystem & Grants:
  15% (150,000,000), creator grants, partnerships.

- Team & Founders:
  15% (150,000,000), vested schedule.

- Treasury / DevOps:
  10% (100,000,000), ops, audits, legal.

- Marketing & Advisors:
  10% (100,000,000).

- Reserve / Future:
  10% (100,000,000)

On-Chain Holder Distribution

The table below provides a transparent view of token distribution across key wallets and categories. Figures are subject to change as trading and transfers occur on-chain.

Holder Address / Category Allocation (%) Tokens Held

Archived copy · cryp2nova.com

Top Holder (Treasury)	20%	200,000,000
Liquidity Pool	15%	150,000,000
CEX Wallets	10%	100,000,000
Community Wallets	30%	300,000,000
Other Holders	25%	250,000,000

8. Distribution, vesting & governance controls

Vesting suggestions (to align incentives):

- Team & Founders: 6-month cliff, then linear vesting over 24 months.
- Advisors: 3-6 month cliff, vesting over 12 months.
- Community rewards / airdrops: drip schedule across 12 months to avoid sell pressure.
- Treasury allocations: subject to multi-sig approval and timelock (e.g., 48–72 hour timelock for >X BNB equivalent).

Governance model:

Token-weighted DAO; proposals require a minimal quorum (example: 3% of circulating supply) and a supermajority (e.g., 66%) for treasury spend above threshold. Implement an off-chain discussion period (Snapshot & forum) then on-chain execution.

CRYP2NOVA

9. Utility & use cases

- Governance voting (parameter changes, grants).
- Staking for rewards, reputation and priority features.
- Grant applications creators stake $BGOAT to apply; DAO votes to fund.
- Marketplace & perks: discounted fees, verified roles, early-access drops.
- Reputation signals: staked balance used as curator/creator credibility.

Archived copy · cryp2nova.com

10. Ecosystem partners, listings & liquidity

Live trading & listings observed:

- PancakeSwap pair (swap interface available for BGOAT on chain-56 / BNB Chain).

- DEX trackers & charts:
  DEXTools and Poocoin show active pair data and charts for the token.

- Aggregators & analytics:
  KyberSwap, ApeSpace and other BSC aggregators list the token. ([kyberswap.com][7], [ApeSpace][8])

- Social presence:
  Official X account @THEBNBGOAT references the CA and community updates.

11. Roadmap (concrete sprints)

Q4 2025 — CTO & Stabilize

- Official Community Takeover on Dex
- Community channels live, pinned admin rules (admins never DM).

Q1 2026 — Governance & Staking**

- Launch staking contract and first reward epoch; publish staking UI.
- First DAO forum proposals (grant candidates).

Q2 2026 — Product

- Marketplace MVP (creator offers), grants pipeline active.
- Integrations with DEX aggregators, deeper listings.

Q3 2026 — Maturity

- Full DAO handover of grant approvals; partnerships expansion; cross-chain exploration.

12. Team, community & communications

- Primary community outlet: X (`@THEBNBGOAT`) Whatsapp and Telegram / Discord (link pinned on X).

- Recommended public disclosures: wallet addresses for team, treasury, liquidity, and vesting schedule; GPG-signed announcements for team identity confirmation.

13. Risks, audits & compliance

- Risks: smart contract vulnerabilities, lack of liquidity, market volatility, regulatory classification risk (possibility of security token designation in some jurisdictions). Users should do their own research.

- Security steps recommended: independent smart contract audits prior to major feature launches, public bug bounty, multi-sig treasury wallet, and timelock for large disbursements. Publish audit reports publicly.

14. Appendix — on-chain references & selected sources

- BscScan — token page (verified contract, supply, holders, txs).

- PancakeSwap — swap / pair interface (BSC chain=56).

- DEXTools — pair explorer / live charts.

- Poocoin — live chart & trades.

- X (Twitter) — official handle `@THEBNBGOAT` listing CA and community updates.

- ApeSpace / aggregators — market analytics listing for BGOAT.
