Trade across chains from Telegram¶

BRO-ker brings wallets, live quotes, spot trading, limit orders, copy trading, bridging, portfolio tracking, and rewards into one private Telegram conversation.

[Start with BRO-ker](getting-started.md){ .md-button .md-button--primary } [Explore trading](trading-flow.md){ .md-button }

One dashboard, five networks¶

Archived copy · cryp2nova.com

BRO-ker keeps each network and wallet separate while giving you one place to move between them.

Solana SOL and USDC trading with launchpad-aware routing, limit orders, copy trading, token alerts, and chart cards.
Ethereum ERC-20 swaps, wallet management, live routing, limit orders, copy trading, and portfolio tracking.
Base The full EVM workflow on Base, including swaps, limits, copy trading, bridging, and analytics.
Robinhood Chain Trading through aggregate liquidity and supported launchpad routes, with limits and copy trading.
Arc A testnet portfolio preview denominated in USDC. Real-value trading is not currently available on Arc.

Current feature support¶

Network	Spot trading	Limit orders	Copy trading	Bridge	Portfolio
Solana	Available	Available	Available	SOL routes	Available
Ethereum	Available	Available	Available	ETH routes	Available
Base	Available	Available	Available	ETH routes	Available
Robinhood Chain	Available	Available	Available	ETH routes	Available
Arc testnet	Not available	Not available	Not available	Environment-dependent	Preview

Bridge and trading routes are checked live. A feature shown as available can still be temporarily unavailable for a particular asset, pair, wallet, region, or provider.

Designed around review before execution¶

BRO-ker shows the selected wallet, route, amounts, slippage, price impact, and minimum received before a quoted trade is submitted. Quotes expire because market conditions change. ERC-20 sells can require a separate approval transaction.

The bot also records its own confirmed executions for position tracking, PnL cards, leaderboards, and reward calculations. It does not reconstruct every transaction a wallet has made outside BRO-ker.

Trading risk

Digital assets are volatile and transactions are irreversible. A token warning, quote, route, chart, or risk scan is information rather than a guarantee of safety or profit. Keep only the funds you intend to

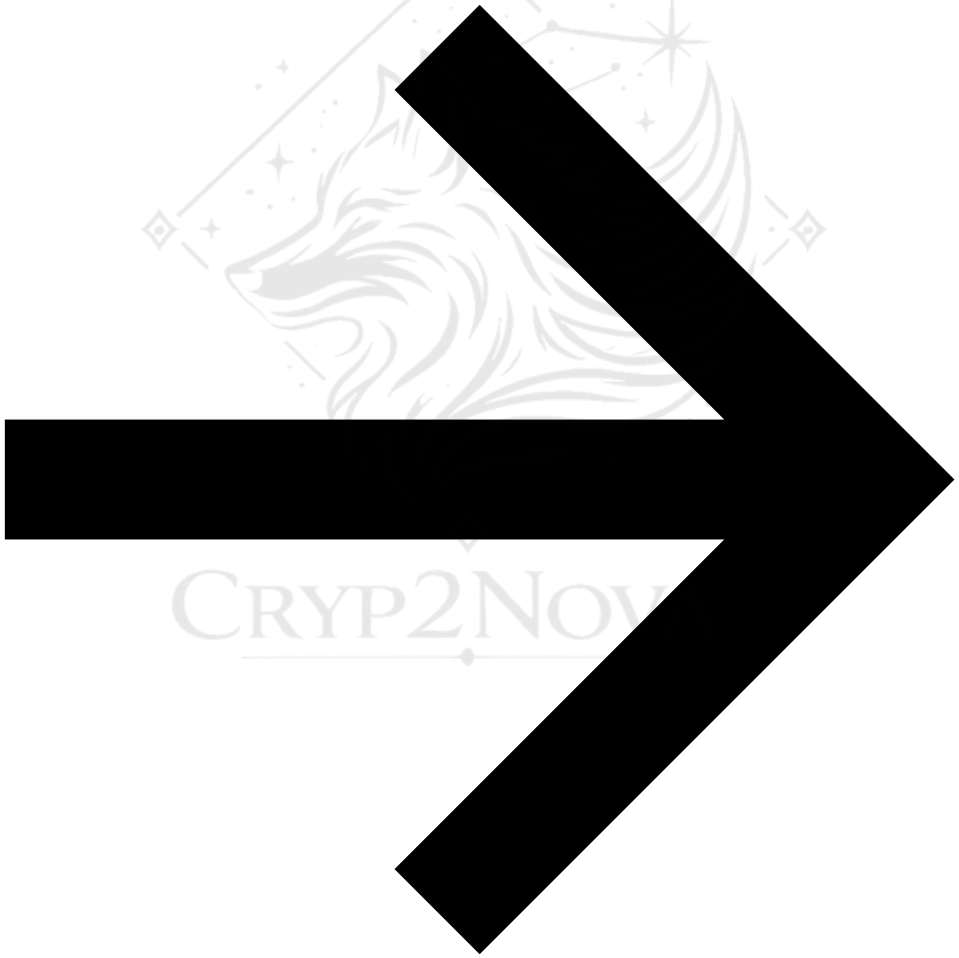

Archived copy · cryp2nova.com

use and independently verify every network, asset, address, and confirmation.

Where to continue¶

- Set up your first wallet and trade
- Understand the wallet model
- Compare trading across networks
- Review security and risk
