B² Network

Copy

Overview

Put Bitcoin in Every AI's Wallet

B² Network is building the settlement backbone for the AI era — where Bitcoin is no longer just "digital gold", but the **currency of autonomous agents**.

We believe that:

- **Bitcoin** is the most secure, scarce, and censorship-resistant digital asset.
- **AI Agents** are becoming new economic actors, requiring native wallets and settlement tools.
- **Stablecoins** provide the predictable pricing and liquidity layer that makes large-scale adoption possible.

By uniting these three forces, B² Network transforms Bitcoin from a passive store of value into an **active medium of exchange for the AI economy**.

Summary

- B² Network
  - Vision: Put Bitcoin in Every AI's Wallet
  - Why Bitcoin + AI + Stablecoin
  - Core Modules Overview
- B² Network: Put Bitcoin in Every AI's Wallet
- Core Architecture
  - Mining² (DeFAI-Mining Router)
  - B² Hub (Layer 1.5 PoSg Consensus)
  - B² Rollup (Bitcoin Layer2)
  - AI Signal (Signal-Driven Agentic AI Layer)
  - U2 Stablecoin (BTC-Collateralized Settlement Layer)
- Technical Design
  - Zero-Knowledge Proof Verification Commitment for ZK-Rollup on Bitcoin
  - A Decentralized Signal-Driven Network for Modular and Agentic Artificial Intelligence

    - Rollup Layer
    - DA Layer
        - Decentralized Storage
        - B² Nodes
        - B² Inscription
        - B² Commitment
        - Bitcoin Network
- For Users
    - Connecting to B² Mainnet
    - Set Gas Price
    - Join B² Network Discovery ↗
    - Bridge to B² Mainnet
    - Transfer BlockHeadz NFT
    - Add B2 token on BNB Chain
- For Developers
    - Basic information
    - Write a contract
    - Deploy a contract with Hardhat
    - Verify contract code with Hardhat in Explorer
    - Verify contract code with Hardhat in Blockscout
    - Integrate Particle Account Abstraction
    - Integrate Oracle Services
    - Deploy a rollup node
    - Deploy a rollup archive node
    - Deploy a node from scratch(snap sync)
- Tokenomics
- Press-Kit
