Candle

Candle is a multichain launchpad, trading, and media platform for tokens on Solana and Robinhood Chain (Hood).

Creators can launch a token against a supported quote asset, choose the amount reserved for CNDL stakers, and publish the token with its image, banner, description, and social links. Tokens trade on a bonding curve until they reach their configured raise, then graduate to an external liquidity venue.

Network	Launch quote assets	Graduation venue
Solana	SOL, USDC, CNDL	Meteora DAMM v2
Hood	ETH, USDG	Developer-selected Uniswap v3 or v4

Candle also provides token discovery, same-chain and cross-chain trading, livestreams, profiles, Wallet IQ, Believer NFTs, CNDL staking, and launch rewards.

CRYP2NOVA

Where to start

- **Launching a token:** follow Launch your first token.
- **Choosing launch terms:** compare every supported combination in Launch options.
- **Trading:** see Trading on Candle.
- **Building an integration:** begin with the Developer overview.
- **Indexing or terminal support:** use Terminals and indexers.
- **Streaming and tipping:** see Streaming, Videos & Tipping.

Archived copy · cryp2nova.com

The launch form displays the exact terms for the selected network, quote asset, and launch tier. Quote-denominated values are authoritative; approximate USD values move with market prices.

Legal

Candle's Terms of Service, Privacy Policy, and the full set of platform policies are published under Legal Notices. Before trading, read the Risk Disclosure Statement.
