Welcome to DINO

Copy

Welcome to CODING DINO! 🦕🌵 $DINO is the first meme token build on ERC50 protocol. No Admins, No Rats, No Rugs. ERC-20 Compatible, Open Source, Fair Mint.

DINO BASE GAMEPLAY

1. $DINO FairMint

Transfer more than 0.001ETH to $DINO token contract address on #BASE to automatically receives $DINO airdrop.

Tips:

- Before the completion of FairMint, transferring the $DINO token back to the contract will automatically refund $ETH.
- After mint reaches supply limit, mint is completed. ETH transferred afterwards, will be automatically refunded.

2. LP Trading

- After completing FairMint, anyone can transfers 0.0005ETH to token address can initiate trading.
- ETH received in the contract, along with same number of tokens minted, automatically added to LP and permanently locked.

3. Security The contract code is fully open source, under the MIT license, with no administrators and no special permissions.

What is ERC50

ERC50 is a protocol build by our developers, especially to upgrade the gameplay in memes token; enhancing the fairness, decentralizations, and security of a meme project.

❌No Administrators : Anyone can start transactions by transferring at least 0.0005 ETH to smart contract. No admin needed to manually start transaction or aidrops.

❌No Rats : With fair minting concept, all traders who join minting, will directly get token airdropped to wallet. Realizing fairness in minting process

❌No Rugs : All tokens transferred are immediately locked in LP 100% after minting ended. Enhancing minting and trading security to the next level

CRYP2NOVA

ERC50 is :

✅ ERC20 Compatible
✅ Open-source code
✅ Fair mint

8 Reasons to recommending community projects to adopt the ERC50 gameplay

1. 100% FairMint, transferring ETH to the token address automatically triggers token airdrops.
2. After reaching the minting limit, anyone can initiate the addition of LP to UniSwap.
3. Because LP is added through token contracts and has no administrative permissions, it is automatically locked permanently.
4. LP generates a 0.3% token income from transactions, which will not circulate again, resulting in continuous token deflation.
5. The entire process is smooth; you only need to remember one token address to achieve "fair launch, no administrators, no rats, no RUG risk".
6. ERC-50 is open source, and more community projects will adopt ERC-50, forming a multiplier effect.
7. Phenomenal MEMEs have emerged on both ETH and SOL chains, bringing wealth to many traders. Now the heat has shifted to the Base chain.
8. The entire process of $DINO is completely decentralized and community-driven MEME, also a MEME with a geek concept.
