👋Concilium

Overview

Concilium is a disruptive Blockchain ecosystem that seeks to generate intangible value by harmonizing three key aspects:

1. Offer: Concilium busca controlar la oferta de su token ($CONCILIUM) mediante un protocolo de inyección de capital externo, compra de token y quema constante, lo que garantiza la estabilidad del precio y protege a los inversores.
2. Demand: Concilium seeks to generate demand for its token through the creation of an ecosystem of useful and attractive applications and services for users.
3. HODL: Concilium seeks to encourage the retention of ($CONCILIUM) tokens by its investors by creating incentives and mechanisms that reward long-term holders.
