FOREWORD

The world is entering a profound stage of technological civilization transformation, where digital infrastructure, digital assets, and digital payment methods are reshaping how humanity trades, stores value, and operates the global economy. The development of Blockchain, e-commerce, and Decentralized Finance (DeFi) is no longer an experimental trend—it is becoming the new infrastructure layer of the digital economy.

In this context, **CoreX Protocol** was established with the orientation of becoming a next-generation digital financial technology ecosystem, taking Blockchain as the core foundation and real-world application as the development focus. The centerpiece of this strategy is the development of **COREXCHAIN**—a Layer 1 Blockchain that serves as the central infrastructure connecting enterprises, trading platforms, and crypto payment systems within a unified, transparent, and globally scalable architecture.

CoreXChain is designed not merely as a blockchain network, but as the technological infrastructure for the next-generation digital economy, where commercial activities, digital asset transactions, and payments are executed with high speed, optimized costs, and standards for security, compliance, and enterprise integration.

The product ecosystem shaping the future of CoreX Protocol includes:

- **Layer 1 Blockchain Infrastructure – CoreXChain**: A high-performance blockchain platform for payments and enterprise integration.
- **Digital E-commerce on Blockchain**: Crypto payment infrastructure for global merchants and marketplaces.
- **Centralized & Decentralized Exchanges (CEX & DEX)**: Digital asset trading systems connecting liquidity and the ecosystem.
- **CoreX Wallet**: A multi-functional digital asset wallet serving as the user gateway into the ecosystem.

CoreX Protocol believes that the right technological infrastructure will create new ways of trading—and these new methods will define a new digital economic standard on a global scale.

Layer 1 Blockchain Platform for the Global E-commerce and Crypto Payment Ecosystem.
