Whitepaper

Securing the Digital Landscape. Smarter, simpler and more accessible cyber security awaits!

Leigh Cronian – Founder and Managing Director

Version: 1.3 Date:

17 May 2026

Leigh Cronian is the visionary behind Cybercentry. With extensive experience in cyber security, blockchain infrastructure, and autonomous AI systems, Leigh co-authored the **ERC-8126** standard with the Virtuals Protocol team and spearheaded the development of the live ERC-8126scan platform.

Under Leigh's leadership, Cybercentry evolved from a 2025 hackathon finalist into a fully tokenised, production-ready security layer for the entire on-chain AI agent economy, delivering real utility through $CENTRY and protecting agents across all EVM chains.

This is cyber security built for the AI agent era, by someone who actually understands both the threats and the technology.
