What is Cybro?

Cybro is a professional liquidity management platform for DeFi users.

It allows users to create, monitor, and manage LP positions across multiple protocols with advanced tools for automation, analytics, and notifications.

Alongside direct LP management, Cybro also provides Vaults - yield strategies designed for users who prefer passive liquidity management.

Key Features

- Dashboard - manage and track LP positions with real-time data.
- Actions - Add Liquidity, Withdraw, Move Range, Compound, Claim Fees.
- Automation - auto-rebalance, auto-compound, auto-exit.
- Notifications - Telegram bot for range alerts and updates.
- Vaults - passive yield strategies with automated compounding.
- Exchange - swap tokens directly inside the platform.
- $CYBRO Token - utility token of the protocol
- Fees - transparent breakdown of protocol, automation, and gas costs.
