DADI Whitepaper

Abstract

DADI is an enterprise-grade, deployment-ready web services stack, built around a microservices architecture.

A fairer internet
DADI is a peer-to-peer network owned by the people, shifting the balance of computational power away from large corporations

Faster and cheaper
The DADI network offers improved efficiency and performance, saving up to 90% compared with traditional cloud services

Environment friendly
Makes use of spare capacity from devices already in the home & office and is better for the environment than large server farms

Earn DADI tokens
Anyone with a laptop, games console or any connected device can earn income by providing spare computation capacity for rent
