The world is tokenizing

~15,000	80%+	$7B
avg. daily token launch	% of scams & rugs	avg. onchain daily volume

As the number of tokens and trading volumes surge, so does the demand for smarter, unified tooling to identify on-chain threats & opportunities!

The Operating System of On-Chain Intelligence

The Problem

On-chain data is noisy, fragmented, and overwhelming.
Dig cuts through the chaos, labeling, linking, and transforming billions of contracts, tokens, and addresses into clean, structured, and actionable intelligence.

Tracking everything. Making sense of it.

The Solution

Dig turns on-chain intelligence into instant action. By connecting data, AI, and execution, it bridges the gap between analysis and performance, tracking wallets, flagging risks, executing trades, and automating triggers in real time. Always-on and context-aware, it’s your on-chain copilot turning insight into alpha.

The Value

Turn speed into alpha. With Dig, you don’t just learn faster, you act faster, automating workflows, following real-time execution paths, and cutting reaction lag to maximize alpha.

DIG AI

Unlocks the new way to trade.

Dig Modes — Surface the signal in the flow

Continuous monitoring of on-chain activity to surface emerging contracts, tokens, and liquidity events.

→ Spot momentum, recovery, and undervaluation in real time

Dig AI — Your intelligence layer for any token

Processes on-chain & off-chain data to extract liquidity health, holder structure, contract risk, deployer patterns, and social traction.

→ Get a clear, data-backed read in seconds

Dig AI Trade — Where intelligence meets execution

Connects signals to action with always-on AI agents that identify high-probability setups and execute or alert in real time.

→ Turn insights into automated trades

Dig’s traction is already there

Live MVP with early users, strategic partnerships, and accelerating growth in queries, points earned, and connected wallets.

TRACTION & VALIDATION

Live MVP & early users: Our MVP is live in production, with early users actively testing features and delivering feedback that sharpens product–market fit.

Growing usage: Key metrics are trending up fast: more queries, more Dig Points earned, and more wallets connected week over week.

Partnerships: We’ve secured strategic partners—including ChainGPT, Maestro Bot, Nova Research, 0xLabs to accelerate model quality, distribution, and enterprise credibility.

$DIG: Token Raise Overview

Stage — Pre-Seed Round

$DIG (native utility)

➜ **Valuation:** Entry at the lowest valuation, early strategic position
➜ **Vesting:** Tokens are vested over 3 months after TGE to ensure long-term alignment
➜ **TGE:** Incoming, TGE aligned with optimal market conditions and brand momentum

Why Now

- Entry at the foundation stage of the Dig ecosystem
- Exposure to a token with live utility
- Backed by a clear roadmap and upcoming TGE catalyst

AI Agent Execution Fees:
Revenue generated from real-time agent actions and automated actions.

Token Advertising:
Promote tokens via banners and native ads.

DIG Business Model

Freemium + Points System:
Accessible entry for all users, driving engagement and discovery.

Subscriptions:
Advanced analytics, automation, and AI tools for power users.

Milestones

PHASE 1

Pre-TGE
Data Layer Genesis
Dig AI Models Bootstrapping
Beta Launch

PHASE 2

App Launch
Private round
Multi-Chains & DEXs
Dig Ai Smart Modes
Dig Points Campaign

PHASE 3

TGE
TGE of $DIG Token
Dig AI Trade
Partnerships & Integration
Smart Portfolio Management

PHASE 4

Scaling
Main release - Dig AI Trade
Dig Mobile App
Developer API & SDK Access
Revenue Sharing System

Team

Dig is led by Paul Bergeon (CMO, ex-asset manager) and Maël Henry (CTO, Web3-native dev), backed by a sharp team covering AI integration, on-chain data engineering, and DeFi product design.

We’re fully staffed to own the full stack — dev, design, and AI — and to build a next-gen token trading experience.
