Welcome to the ESM X token Whitepaper

The ESMX token powers the ESM X platform used as main currency to compete and get rewarded on various gaming activities. Also serves as an investment in the constantly growing web3 gaming market with special gaming utilities and Node owning opportunities.

EsportManager (ESM) is an already running competitive gaming tournament platform with **30,000+ registered traditional players, 750+ organized inline events** and an **offline venue called Gamerland.**

The main goal is to utilize the already existing gaming infrastructure, tournament software and user base of EsportManager to onboard traditional players to web3 gaming and help web3 brands to reach potential customers.

As a starter, we will hold the first official MEME LEAGUE where the largest degen communities can battle agains each other in various competitive games. Also, to celebrate the project launch a huge EA FC tournament will be held with a massive ETH prize pool.
