Ethermax

Copy

A Next-Degeneration Smart Contract & Decentralized GameFi Platform

Ethermax is a meme-engineered, on-chain game for terminally online degenerates. Fueled by decentralized chaos and permissionless finance with the structure of a hybrid consensus protocol: Proof-of-Work (PoW) and Proof-of-Stake (PoS) to deliver play-to-earn and hold-to-earn mechanics — because why not both?

In the Stage 1 players can mine, stake, and refer to earn rewards in a ruthless hashrate PvP race while defying financial logic.

In the Stage 2 we'll unleash a wave of new $MAXX-powered games within the Virtual Machine protocol.

Introduction

When Satoshi Bigmoto first set the Bigcoin protocol into motion in April 2025, it sparked a new trend, unleashing a wave of experimental on-chain degeneracy. Ethermax builds on this foundation with a refined protocol, evolving as a bold progression — you mine it, stake it, and shape the future governance protocol

Ethermax aims to elevate the Web3 gaming experience by implementing Ethereum-inspired mechanics with community-driven GameFi innovation, backed by solid tokenomics and an active development team. Powered by Base, Ethermax delivers blazing-fast transactions, minimal gas fees, and seamless ETH compatibility while maintaining the security guarantees of Ethereum mainnet.

> Stage 2 has begun and Battle Nexus has been released with a new Power-of-Train consensus protocol
