FIRE BALL

OFFICIAL REDPAPER

(A Decentralized rewards platform operating on the smart contract)

FIREBALL (FIRE Token)

(Deflectionary Token, Staking & Gaming)

Archived copy · cryp2nova.com

About **FIRE BALL**

Fireball is a di-functional autonomous staking rewards and gaming platform.

The ideology of fireball is to burn FIRE token while only the holders/stakers really get rewarded on a long run.

Current market situation and Fireball impact

Inflationary model allows for more circulation of tokens in the market which directly reflect on the price in downward manner. Deflationary disallows hyper-inflation ,reduces the tokens in circulation and creates market scarcity which directly affects price movement in positive way

Deflationary

Fire token charges 10% fee for every transaction on eth network. 5% of the transaction is burnt and 5% distributed to stakers immediately according to their amount.

Ignite Fire

All staking is programmed to remain for at least 30 days while receiving staking reward. Rewards are paid from 5% transfer fee.

Quench Fire

Every stake lasts for minimum 30 days. Any unstaking will attract 20% fee which is distributed to stakers.

Ignite over 30days

There will be other reward for igniters who stake over 60 days, 90 days, 120 days and 150 days without pressing the quench button... This shall be announced in our social media channels soon.
