CRYP2NOVA

Getting Started

The Era of Expressivity is Here

Fluent is the first blended execution network where EVM, WASM, and SVM (soon) contracts talk to each other like they're written in the same language. No bridges. No friction. Just pure *expressivity*.

Archived copy · cryp2nova.com

💡 The Fluent Advantage

EVM, SVM and Wasm blended into one chain. Build 10x apps with a 10x toolkit.

Target Audience

The main audience for this documentation are smart contract developers deploying on Fluent, using the `gblend` CLI tool and Fluentbase SDK. To a lesser extent, the documentation also serves infra operators and protocol engineers.

Choose your adventure and start blending!

Connect to Fluent You know what to do? Connect to Fluent and blend it.	**Developer Guides**Deploy blended apps in minutes. Rust ↔ Solidity made simple.	**Study the Tech**Dive deep into rWasm and blended execution architecture.

`gblend`: Your New Best Friend

If you're an application developer on Fluent, no matter your language of choice, the `gblend` CLI tool handles everything from project scaffolding to deployment.

🔍 Start Blending

Get started in just a few commands with the quick install.

Why Developers Choose Fluent

🚀 **Write in Your Favorite Language**
Build with Solidity's ecosystem maturity, Rust's performance, or just blend it all in one app.

⚡ **True Cross-VM Composability**
Your Rust contract calls your Solidity contract directly. No complex bridging or state synchronization.

🔧 **Ethereum L2 Benefits**
Same security guarantees, familiar tooling, existing wallet support—but with ~~multi-VM~~ *blended VM* superpowers.

🔍 Info

Currently in public testnet with Solidity and Rust support. More languages coming soon.
