Welcome to the **FluidTokens documentation**!

FluidTokens is currently one of the top **leading ecosystem on Bitcoin and Cardano blockchains**, offering a world of innovative financial services. Our open, trustless and secure ecosystem offers different **non-custodial** DeFi services for any crypto user, always following the community needs and feedbacks.

On **Bitcoin**, FluidTokens has created the first 100% permissionsless lending protocol that supports BRC20, Runes and Ordinals along with all the major BTC wallets. The lending protocol doesn't need any centralized entity or Layer 2 to function, thanks to our innovative BitWeave technology. We are currently working on several additional DeFi services that will run directly on Bitcoin Layer 1.

On **Cardano** FluidTokens enables the following protocols:

- **Multi Pool Lending**: Provide liquidity as lender and control your own pool, deciding the conditions to borrow, the interest, who can borrow and what type of collateral can be accepted. Automatic liquidations and compounding, refinancing loans, installments and much more. Institutions can leverage multisignature wallets support to protect their deployed liquidity.
- **P2P Lending**: Anyone can request liquidity (in any currency) using his/her NFTs and Fungible Tokens as forms of collateral. In the same fashion, anyone can be a lender to earn interest.
- **Aquarium**: A rewarded decentraliced protocol to pay any transaction fee with custom tokens and to automate your smart contracts actions.
- **Renting**: An innovative protocol that allows token holders to rent their assets to anyone that needs them (utility tokens, metaverse assets, nft memberships, real world assets).
- **Boosted Stake**: A unique service to lender and borrow Cardano Ada staking power, to have more voting power, staking rewards, ISPO rewards and more.
- **Buy Now Pay Later**: buy NFTs and tokens at a discounted price, paying with smaller installments.

FluidTokens is community-centric, prioritizing a great user experience - listening to the community suggestions - and allowing everyone to be an active member. As the ecosystem protocols are non-custodial, any user can benefit from them!

FluidTokens is also going to become a cross-chain and multi-chain ecosystem, supporting other blockchains such as Midnight and Midgard.

The official DAO (FluidDAO) has been legally enstablished in Switzerland. The $FLDT token is the **most fair token launch ever made on Cardano**, with zero VCs, no pre-sale, long vesting periods and most of the token given directly to the community! $FLDT is also one of the top traded tokens in the Cardano ecosystem and will be soon bridged as a metaprotocol on Bitcoin too.

All FluidTokens protocols are audited by trusted third parties.

Features

Archived copy · cryp2nova.com

- **Community First**: FluidDAO and $FLDT will guarantee benefits and governance to the users. The development of the ecosystem will also follow the needs of the community and not the one of any private investor.
- **Innovation-Driven**: Publishing our V1 Whitepaper in February 2022, we've been the first in the Cardano space to propose an NFT-based lending platform. In 2023 we have also created Renting and Boosted Stake for the first time ever on Cardano. In 2024 we released the BitWeave technology on Bitcoin, enabling true DeFi on Bitcoin without the need of additional layers or sidechains. We plan to continue bringing new ideas and protocols that can enrich the DeFi ecosystem.
- **Solid yield for your assets**: One of our main missions is to create more use cases to show that tokens hold much more value than previously thought.

2026 Main Objectives

- Bitcoin-Cardano non custodial bridging for DeFi
- Privacy-focused DeFi protocols
- Yield aggregation and farming
- Decentralised automation and AI support
- Real World Assets full support
- Simplifying web3 user experience to onboard non-crypto users

We value your feedback

We are committed to product excellence and deliver a premium experience to our community. Please reach out to us directly.
