What is FOREST?

A modular creation protocol on BNB Chain where tokens, apps, and games launch into a programmable and self-sustaining economy in customizable ways.

Archived copy · cryp2nova.com

Forest Protocol is a modular creation protocol on BNB Chain where every token launches with configurable mechanics, built-in apps and games, native staking, and a protocol-wide economy. Creators configure the launch. Playkit provides the infrastructure. The $FOREST economy powers the liquidity. Builders, studios, and AI agents all operate on the same stack.

> Tokens aren't templates. They're economies you design.

FOREST provides:

Launch Mechanics | Economic Infrastructure | Development & Agentic Layer

- Fixed 1B token supply with fully configurable distribution
- Customizable bonding curves - Linear, Exponential, Logarithmic
- Dynamic fees and buyback models
- Built-in staking from day one
- $FOREST-backed liquidity from the first trade
