☝️ Meet Friend3

Copy

Overview

Friend3 ↗ is a leading social dApp where anyone can make friends and profits in the Web3 world. We're revolutionizing the social monetization landscape by offering **customizable pay-per-group communities** and introducing **a decentralized donation mechanism**, enabling **passive income** for all. This boosts direct financial incentives for content creators, thereby completing the **creator economy**'s ecological loop.

Beyond just chat, our vision extends to applications like event ticketing, ensuring we stand out from platforms like friend.tech ↗. At our core, we prioritize individual control, security, and a seamless user experience.

Friend3 is the top trending social dApp on BNB Chain & opBNB. The Friend3 beta app (live on BNB Chain) has **45k** users and **200k** transactions within just seven weeks and is the first dApp to offer customizable pricing curves in social protocols with a unique mechanism to empower the creator economy. Check BNB Chain statistics here ↗ (As of October 31st, before the release of **Friend3-opBNB**).

Custom Pricing Mechanism

Inspired by the decentralized pricing mechanism employed by friend.tech, Friend3 introduces its unique **Decentralized Pricing Formula** for calculating the admission ticket price for paid groups. The formula is expressed as:

$$P = S^2/K$$

P = S2/K

Variables Explained:

- **P**: Represents the price of the admission ticket.
- **S**: Indicates the current group size, or the number of tickets currently held.
- **K**: Defines the steepness of the price curve, dictating how quickly the ticket price rises or falls based on the group size.

The beauty of this formula lies in its **dynamic nature**. By allowing the ticket price PP to be dependent on the current group size SS and a predefined steepness factor KK, Friend3 offers a pricing model that adjusts in real-time. This ensures an adaptive, market-responsive ticket pricing strategy, which enhances user engagement and incentivizes community growth.

Getting Started

Friend3 beta is launched on **BNB Chain**: https://bnb.friend3.group/↗

Friend3 has launched its **opBNB** version now: https://opbnb.friend3.group/↗

Here is an **unlimited invite code** for login both: friend3-011bab79
