About GAIB

GAIB is an AI infrastructure capital partner. We originate, underwrite, and manage financing for the compute that powers the AI economy — GPUs, robotics, and AI energy systems — and tokenize that exposure into investable on-chain instruments. GAIB connects institutional and on-chain capital to the real-world assets behind AI.

AID is the first product built on GAIB's economic layer, designed as a synthetic dollar fully backed by the U.S. treasury and stable assets.

sAID (staked AID) is the receipt token issued when AID is staked into GAIB's ERC-4626 vaults, representing the proportional ownership in GAIB's diversified portfolio of real-world AI compute infrastructure financing deals and a reserve of treasury bills.

Through sAID, investors gain direct exposure to real-world AI infra with sustainable AI-driven yields, while preserving liquidity to enable broader participation across DeFi markets.
