Overview

Overview

Meteon Run is a Play-to-Earn endless running game built on the Polygon Network, combining fast-paced arcade gameplay with a sustainable Web3 economy.

Set in a vast cosmic universe, players guide **Meteon** — our signature character — through alien worlds, dodging obstacles and racing across planets in classic endless-runner style.
Each player equips NFT shoes with unique stats and get **GMTO** for every successful run. Stages grow more challenging as players progress, delivering both the thrill of arcade gaming and the satisfaction of measurable on-chain progress.

A dual-token economy designed for longevity:

Token	Role
GMTO	Utility token. Get through gameplay. Burned daily to maintain scarcity. Listed on global exchanges.
MTO	Governance and premium token. Anchors long-term value and ecosystem participation.

What sets Meteon Run apart:

- **Two distinct game modes** — Safe Mode, Challenge Mode.
- **Automated daily GMTO burn** — a transparent, on-chain deflationary mechanism tied to in-game activity
- **Staking** — long-term holders get passive rewards
- **NFT marketplace with real liquidity** — buy, sell, and trade sneakers seamlessly across mobile and web

Already live in production with thousands of active players across iOS and Android, Meteon Run is a fully operational Web3 game economy where players, holders, and partners all benefit from an active, transparent ecosystem.
