01 AT A GLANCE

What Garly is today

Garly is a privacy-first personal safety companion designed to help people prepare, check in and reach trusted contacts.

01

Prevent

Protection settings, motion-aware monitoring, scheduled surveillance windows and safety check-ins.

02

Connect

Trusted contacts, manual SOS, private live journey sharing and Telegram-assisted notifications.

03

Remember

Optional account-scoped memory for routines, places and preferences, controlled by the user.

04

Coordinate

Community referrals, off-chain Garly Points and a multisig-based Safety Pool pilot.

IMPORTANT BOUNDARIES

- Garly is not an emergency service and does not replace local authorities, medical help or a trusted adult.
- Sensor, network, location and notification availability can fail or produce false positives.
- The product does not guarantee prevention, rescue, financial returns or token value.
- Users choose which optional data and safety features to activate.

02 PRODUCT

A safety flow people can understand

The experience is built around preparation before an incident, a clear response during it and user-controlled follow-up.

1

SET UP

Create an account, add trusted contacts and decide what Garly may remember.

2

START

Choose Protection Mode, a surveillance window or a live journey when needed.

3

RESPOND

Use manual SOS or let enabled signals start a cancellable safety countdown.

4

FOLLOW UP

Share only what is needed, stop sharing and review or delete stored information.

CURRENT CONSUMER CAPABILITIES

- Manual SOS and trusted-contact alerts
- Private live journey links with automatic expiry
- Places, routines and optional private memory
- Privacy lock and account-isolated storage
- Motion, stillness and configurable sensitivity profiles
- Android background protection where permissions allow
- Optional parental-mode safety restrictions
- Local acoustic safety testing under active development

03 DATA AND TRUST

Privacy is a product control

Garly handles sensitive safety context. The design therefore separates accounts, limits sharing and keeps high-risk actions explicit.

USER-CONTROLLED

Private by choice, not by assumption.

- Memory is optional and can be reviewed or deleted.
- Privacy Lock protects sensitive sections with a separate code.
- Live Journey shares a temporary private view rather than a permanent public route.
- Trusted contacts receive only the alert or context required by the selected feature.

ACCOUNT ISOLATION

Chats, memories, contacts, places, routines, points and preferences are scoped to the authenticated account. Local state is separated and cleared when the active account changes.

ON-CHAIN BOUNDARY

The Safety Pool places wallet addresses, approvals and token transfers on Solana. Personal safety notes and private contact details are not intended to be written on-chain.

WHAT CONSUMERS SHOULD STILL PROTECT

Device access, email credentials, wallet seed phrases and signing devices remain the user's responsibility. Garly never needs a wallet seed phrase or private key. Any wallet approval should be checked in the wallet before signing.

04 AVAILABILITY

Where the product can be accessed

Distribution is being expanded in stages. Store availability can vary by review state, tester eligibility and region.

NOW

Android / Google Play

CLOSED TESTING

The Android app is packaged for Google Play and distributed through a closed testing track while device behaviour is validated.

NOW

Solana dApp Store

CURRENT LISTING / ANDROID BUILD

Garly has a Solana dApp Store distribution path for its signed Android package and Solana-connected experiences.

NEXT

Apple App Store

PLANNED

An iOS App Store listing is a future distribution goal. It is not available today and no release date is promised in this document.

CRYP2NOVA

STATUS NOTE

This whitepaper records product status as of 27 July 2026. It is not a promise that a store will approve, retain or distribute a future version.

05 ECOSYSTEM

$GARLY, Garly Points and referrals

The current system separates the Solana community token from off-chain beta points. They are related to participation, but they are not the same asset.

$GARLY

The project's Solana community token. Current product pages use token holding as an eligibility condition for selected community referral participation.

OFFICIAL MINT

`HNDFkPM2LgAMX6tK38ViwHWzmzuiQb6Kjqt4EHcMpump`

Garly Points

Off-chain beta rewards recorded inside Garly for eligible participation. Points are not cash, cryptocurrency, guaranteed token rights or a promise of future value.

CURRENT ROLE

Track verified referral activity and preview future optional community or cosmetic rewards.

CURRENT REFERRAL FLOW

1

Eligibility

A user meets the currently published referral conditions.

2

Share

The user shares a personal referral route.

3

Verify

A qualifying registration or action is checked by the system.

4

Record

Eligible Garly Points are added off-chain to the account.

06 SOLANA COORDINATION

The Garly Safety Pool

A Mainnet-oriented pilot for a private circle to coordinate emergency USDC funds without giving Garly or Telegram unilateral control.

CURRENT PILOT DESIGN

- Official Circle USDC on Solana Mainnet
- No custom Garly smart contract
- Recommended 2-of-3 operator approval
- No server-held wallet private key

APPROVAL BOUNDARY

Telegram approval records the trusted circle's social decision. It cannot move funds. An approved withdrawal still requires the configured Squads operators to sign and execute the on-chain transaction.

Archived copy · cryp2nova.com

07 ROADMAP BOUNDARY

Future holder and community utility

These directions are planned or under evaluation. They are not active rights, financial commitments or guaranteed rewards.

A

Optional customisation

Themes, backgrounds, badges and alternate evolution variants may be unlocked through future points or community systems.

B

Community participation

Selected beta programs, referral campaigns or product feedback initiatives may recognise eligible participants.

C

Holder-linked access

Future Garly products may use transparent token holding criteria for selected non-core features or community experiences.

D

New reward projects

Additional projects may create rewards for people who hold or actively support $GARLY, only after their rules are published.

CRYP2NOVA

NO IMPLIED FINANCIAL PROMISE

No price target, yield, return, redemption value, distribution schedule or future token allocation is promised here. Any future mechanism must publish its own rules, eligibility, risks and legal status.

Archived copy · cryp2nova.com

08 REALITY CHECK

What remains to be proven

Garly is an active product under testing. Safety, privacy and financial coordination require cautious releases and evidence from real devices.

Product reliability

Reduce false SOS triggers, validate background behaviour and make alerts understandable on supported devices.

Pool production controls

Complete end-to-end multisig withdrawal tests, operator recovery procedures and independent security review.

AI and acoustic testing

Improve response reliability and verify that optional local sound analysis works with explicit microphone consent.

Legal and regional review

Assess consumer safety, privacy, token and financial-service obligations before broader availability.

Store readiness

Continue Android and Solana store review work before pursuing an Apple App Store release.

Transparent reward rules

Publish exact eligibility and limits before activating any new holder or points-based benefit.

CRYP2NOVA

A safety product should earn trust through testing, explicit controls and honest limitations - not through exaggerated claims.
