👋 Intro

Copy

goodcryptoX is a multi-exchange terminal for **CEXs** and **DEXs**, offering advanced orders, fully automated trading bots, portfolio tracking, alerts, and market research tools — everything you need to manage your crypto portfolio in one place.

Launched in 2019 as GoodCrypto, the platform started as a terminal for centralized exchanges. Since then, over $5 billion has been traded through the app, with over 400,000 users onboarded.

In 2024, we added *decentralized trading* and rebranded to goodcryptoX to reflect our expanded mission. You may still see GoodCrypto in some places — rest assured, GoodCrypto and goodcryptoX are the same platform at different stages of evolution.

📈 Centralized exchange trading

goodcryptoX supports over 30 major CEXs (spot and derivatives) through a unified interface with advanced orders and fully automated trading bots — including DCA, Grid, and Infinity Trailing strategies.

All CEX integrations are non-custodial: connect your exchange accounts via API keys and keep full control of your funds.

🔁 Decentralized exchange trading (Spot)

DEX trading in goodcryptoX is live on Solana and leading EVM chains, offering tools typically available only on centralized platforms. You can place limit and trailing orders, run DCA and Grid bots, use screeners with auto-buying, and more.

Archived copy · cryp2nova.com

Built-in wallets are secured with enterprise-grade MPC technology across all supported chains. On EVM networks, we leverage account abstraction and smart contract wallets to enable fully non-custodial trading.

On-chain futures trading is coming soon to goodcryptoX through integrations with platforms like Hyperliquid and dYdX. These integrations will unlock the same bots and advanced order types already available for centralized exchanges — bringing the full power of goodcryptoX to on-chain perpetuals from day one.

⚡ Perp DEXs

goodcryptoX supports Hyperliquid with more Perp DEXs coming soon.

On Hyperliquid, goodcryptoX provides the same advanced toolset available on CEXs — from trailing stops and multi-target take-profits to automated bots (Grid, DCA, Infinity Trailing), TradingView webhooks, and more.

Our Hyperliquid integration is non-custodial: you connect an API wallet that enables order placement through goodcryptoX but does not permit withdrawals.

💳 Subscription & fees

We don't charge trading fees on centralized exchanges, and basic functionality is free. A subscription is required to unlock advanced features — including higher limits on bots, alerts, and other tools.

On decentralized exchanges (both Spot and Perp DEXs), trading is available without a subscription, but a swap fee applies. This fee can be reduced through increased trading volume, holding the GOOD token, getting a higher subscription plan, or owning our Ultimate NFT.

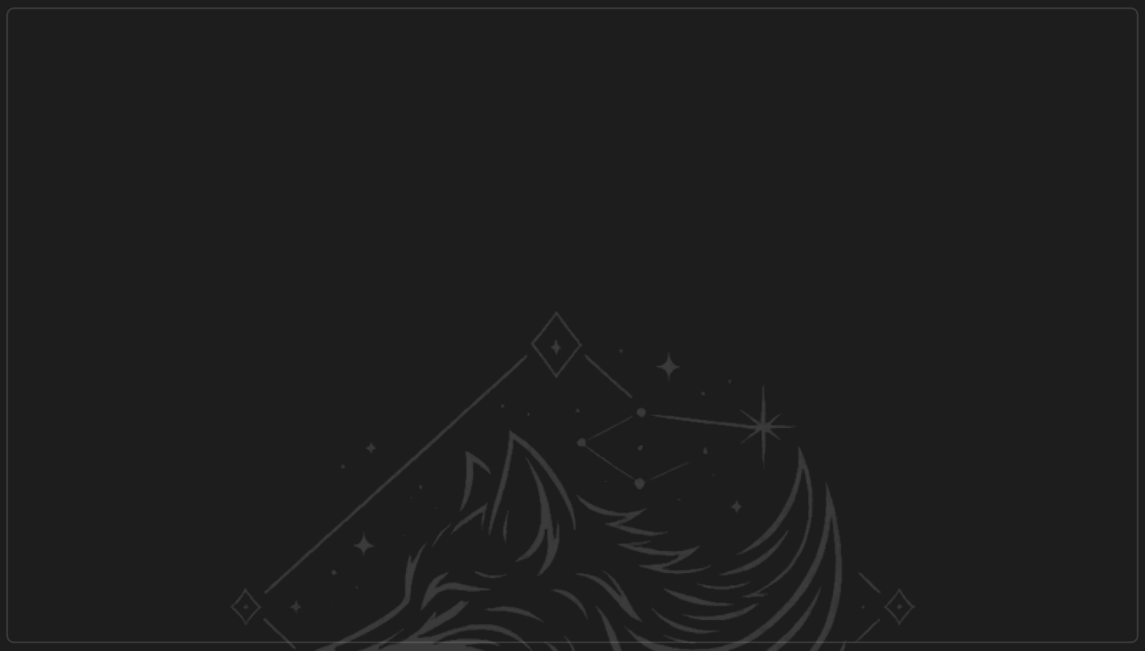

🪙 GOOD token

The GOOD token powers the goodcryptoX ecosystem. Holding $GOOD unlocks revenue sharing, swap fee discounts, and other exclusive benefits.

Archived copy · cryp2nova.com

GOOD is long-term deflationary, with a fixed supply of 1 billion, and ongoing burns to reduce the supply over time.

You can buy GOOD directly inside the goodcryptoX app or via Solana DEXs through Jupiter or Raydium.

👥 Referral program

We have one of the most profitable referral programs in crypto:
Earn **up to 50%** of your referrals' DEX swap fees (on Spot and Perp DEXs), plus a share of their subscription payments, and rebates on their CEX trading volume.

🎁 Airdrops

GOOD token ecosystem includes ongoing airdrops that reward active traders and loyal holders. Airdrop One rewarded our earliest app adopters before TGE, while Airdrop Two is now live with **2M GOOD** to be allocated to the most active traders.

🚀 Getting started

CEX trading

1. Connect your CEX account via API key
2. Choose an order type or bot and launch your first trade.

Perp DEXs (Hyperliquid)

1. Connect the wallet that controls your Hyperliquid account
2. Approve API wallet creation and builder fee
3. Choose an order type or bot and launch your first trade.

DEX trading (Spot)

1. Create a wallet with one click
2. Transfer coins from another wallet you control or buy them with 💳
3. Choose an order type or bot and send your first swap or launch your first DEX bot.

📱 Platforms

Full goodcryptoX functionality is available on Web ↗, Android ↗, and iOS ↗.

🌐 Investors

Our investors include Fenbushi Capital ↗ – a prominent crypto VC, GSR ↗ – the largest crypto market maker, Cointelegraph ↗ – a leading crypto media outlet, and several hundred of our most active early adopters, whom we invited into our pre-seed round.
