GYOZA

Copy

This is a brief description of GYOZA and its features.

GYOZA is a multipurpose tool that allows its users to get access to various data from ETH blockchain collected by our algorithms. Information about unusual volume spikes, insider accumulation, alpha hunter activity is collected, parsed and provided to the holders of GYOZA token via number of telegram bots.

You can find info about bot tier system with brief description in this very gitbook!

Happy trading!
