🚀 Rocket Perps is LIVE. Trade at 1000x leverage, tap asteroids for XP, and earn bonus $HOME. Play now. ↗

Welcome

Copy

Welcome to Defi App, a streamlined and modular DeFi platform built to make decentralized finance simple for everyone.

Defi App is a decentralized trading platform for swapping tokens, trading perpetuals, and earning yield, all from one interface and across EVM and Solana. Whether you are new to *DeFi* or an experienced user, we provide the tools and features you need to navigate the world of DeFi effortlessly.

What You Can Do

Swap Tokens — Exchange any token across many chains. Cross-chain swaps execute automatically; no bridging, gas token management, or slippage configuration required.

Archived copy · cryp2nova.com

Trade Perpetuals — Open leveraged long and short positions with up to 100x leverage on some assets. Defi App now supports US stock perpetuals via HIP-3. Perpetuals trading uses isolated margin and supports multiple collateral types.

Earn Yield — Deposit assets into yield-generating strategies. Defi App aggregates opportunities across DeFi protocols and presents them in a unified interface.

Earn HOME Rewards — Receive $HOME tokens for trading activity. Stake $HOME to unlock governance rights, fee discounts, and boosted rewards.

Compete — Defi App hosts Battle Royale, a trading competition where participants via realized PnL compete for a share of rewards.

Platform Features

Gasless Transactions — Defi App sponsors gas fees across all supported chains. Hold any token and trade immediately without acquiring native gas tokens.

Unified Wallet Management — Manage EVM and Solana wallets from a single interface. New users receive both wallet types automatically on signup.

Cross-Chain Execution — Swaps between different chains settle behind the scenes. Select your source and destination tokens while Defi App handles bridging and routing.

Self-Custody — All assets remain in your wallets. Defi App never takes custody of funds.
