👑Welcome to Hypr

Copy

Hypr is a Web3-native investment club that connects real-world businesses with on-chain participants through transparent NFT-based participation models.

Each business listed on Hypr, referred to as a Drop, represents a verified, revenue-generating venture such as an F&B outlet, lifestyle brand, or entertainment concept. Participants can acquire NFT memberships that provide access to performance-based revenue allocations and exclusive opportunities within the Hypr ecosystem.

Core Features:

- **NFT Participation Layer:** Each NFT represents membership access to a specific business Drop, recorded and verified on-chain.
- **Automated Revenue Distribution:** Smart contracts handle transparent and bias-free disbursements according to verified POS data.
- **Verifiable Data Infrastructure:** POS integrations ensure that sales and revenue reports are immutable and publicly auditable.
- **Tier System:** A contribution-based structure that determines access priority, allocation weight, and platform benefits.

For Businesses

Hypr provides compliant fundraising and community engagement infrastructure. Brands gain exposure, transparency, and a direct relationship with their supporters, while Hypr manages structuring, reporting, and revenue automation.
