Introducing "Infinite Trading"

Infinite Trading is a platform that revolutionizes automated trading strategies within the Ethereum ecosystem, including its layer two solutions such as Optimism, Arbitrum, Base, and it's sidechain Polygon PoS. Powered by artificial intelligence and incorporating advanced yield farming strategies, Infinite Trading offers users a seamless and fully automated trading experience.

Infinite Trading combines the power of automation, AI, and decentralized finance to empower users with unparalleled trading opportunities. By providing a user-friendly interface, access to a diverse range of strategies, and customizable services, Infinite Trading aims to revolutionize the way traders engage with the world of digital assets and automated trading. Most of the strategies of Infinite Trading are hosted in dHedge and DeFund protocols which are non-custodial asset management platforms that allow managers to create decentralized funds.
