What is Infrared?

Infrared is focused on building infrastructure around the Proof of Liquidity (PoL) mechanism pioneered by Berachain. The protocol aims to maximize value capture by providing easy-to-use liquid solutions for BGT and BERA, node infrastructure, and vaults. Through building solutions around Proof of Liquidity (PoL), Infrared is dedicated to enhancing the user experience and driving the growth of the Berachain ecosystem.

Why use Infrared?

Infrared simplifies participation in Berachain's Proof of Liquidity (PoL), helping users maximize their BGT and BERA rewards through easy-to-use products like iBGT and iBERA. Infrared's products also enable new flywheels throughout the Berachain ecosystem that wouldn't otherwise be possible by making BGT and staked BERA composable.
