What is Jones?

Jones is a **yield**, **strategy**, and **liquidity** protocol with vaults that enable 1-click access to institutional-grade strategies. These strategies unlock liquidity and capital efficiency for DeFi through yield-bearing tokens.

There are three main categories of users Jones is built for:

- Users who don't want to actively manage their strategies or would like to utilize the strategies deployed by the vaults but don't know where to start.
- Users who prefer liquid tokens over locked tokens.
- Protocols that want to earn additional yield on their treasury positions.
