Kalkulus Whitepaper

WHAT IS KALKULUS
Kalkulus is a decentralized digital asset that offers blockchain based solutions enabling instant transactions to anyone, anywhere in the world.

Kalkulus just entered the second stage on his life-cycle and want to represent as a long-term project for investors, traders or just cryptocurrency lovers. Leveraging an open source and peer-to-peer technology to operate with no central authority or banks, Kalkulus is a solid community-centric project and provides anonymous and fast transactions in a stable and well designed economic model.

Kalkulus offers a long-term and perfectly balanced passive income for stakers and masternodes holders that contribute to maintaining the KLKS blockchain keeping it a fast, stable and secured network.

EASY TO USE
The set of tools already developed plus the future implementations already planned like KLKS Staking Box and mobile wallet apps, allow to everyone to check balance, stake coins, run masternodes, send and receive payments very easily without needing advanced technical skills.

DEFLATIONARY ASSET WITH LOW SUPPLY
With a total supply of 20 million coins distributed through proof-of-stake, KLKS block rewards and coin emission scheme are designed in order to reduce inflation and preserve investors from coin market flood.
GOVERNANCE BUDGETING SYSTEM
An advanced governance budgeting system based on consensus will allow you to submit and vote on proposals through blockchain, favoring decisions on how to allocate budgets for development.
