Introduction

The Problem

We find ourselves at the heart of the AI revolution, a transformative era where jobs are increasingly being taken over by AI applications and robotics. The challenge is that AI isn't working for everyday people, but rather for big corporations and wealthy investors who can afford to invest in and create AI systems for their own benefit.

A crucial question emerges: How can everyday people harness the value of the AI revolution to ensure AI works for them, rather than leaving them behind? This challenge is what KiraAI's mission aims to solve.

The Solution

We need to build a mechanism without barriers that allows everyone to participate in harnessing AI's power, working for their benefit while automatically distributing profits.

Let us introduce Kira Kuru, our AI Agent hedge fund manager with a proven track record↗. Kira excels at selecting optimal delta-neutral strategies to capture trading opportunities in the crypto market. These opportunities include:

- Funding rate arbitrage
- Spread arbitrage
- MEV arbitrage
