Who is Larix

Copy

Larix is the first Metaverse based Finance Protocol on Solana, adopted a dynamic interest rate model and created more capital-efficient risk management pools, as such a broad selection of collateral types, crypto tokens, stablecoins, synthetic assets, NFTs, and other kind of assets (account receivables, invoices, mortgages, etc.) can be fully utilized in a safe way. Furthermore, the rewarding system based on a delicately designed token economy enables continuous incentive allocation to boost demands. All VALUABLE assets could be accepted by Larix.

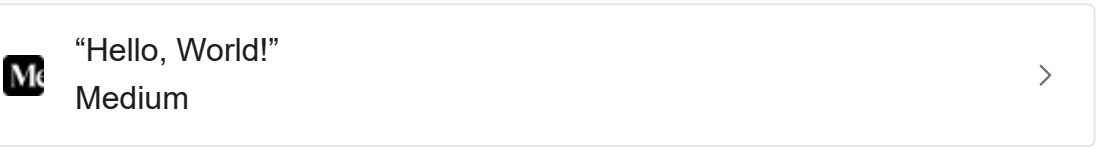

Larix is the first lending protocol on Solana who maintains basic SPL lending needs and who aims to bridge new types of tokens like synthetic assets, and NFTs. Therefore, lending/borrowing is an infrastructure for determined token holders who have great confidence on token value and also want to get APY interests in the long-term besides value growth. Larix now is:

- The first lending protocol with live mining functionality
- The first lending protocol Audited on Solana

- The first lending protocol partially Open-Sourced on Solana

Encouraged and inspired by the Solana team, we are determined to take the challenge and the opportunity to build Larix – the lending gateway of Solana, Raydium, and Serum. Larix leverages pool-based collaterals and a dynamic ratio optimizer to enable instant loans.
