Lens Project

Lens is a Telegram based on-chain intelligence bot built to help users track smart wallets, catch early entries, and move faster with more clarity.

No bloated dashboards.
No overcomplicated workflow.
Just fast, useful signal delivery inside Telegram.

Built for traders who want actionable information, not noise.

The goal with Lens is simple:

Give users a faster and cleaner way to follow meaningful on-chain activity.

Lens monitors selected wallets, detects buys in real time, enriches alerts with key data, and delivers them directly inside Telegram in a format that is easy to read and act on.

This is not about spamming alerts.
This is about surfacing the right information, quickly.

Track smart wallets. Catch momentum early. Stay ahead.
