Overview

Lista DAO, a decentralized autonomous organization, is a lending protocol, a liquid staking solution for BNB, and a Collateralized Debt Position (CDP) protocol on the BNB Chain. Lista DAO is also backed up by Binance Lab (now YZi Labs), with a strategic investment of 10M USD.

Since our launch, Lista DAO has achieved several milestones, including our official TGE on Binance (June 20th, 2024) for our governance token, LISTA, key updates such as our AMO, the launch of ListaPie, and our Lista innovation zone. Our strategic partnerships with different protocols have also expanded our ecosystem and brought additional value to our users. By adhering to our core values and continuously innovating, Lista DAO strives to be a leader in the DeFi space, providing users with secure, efficient, and empowering financial solutions.

Mission

Our mission is to drive the evolution of DeFi by tackling key challenges in liquidity provision and delivering premier liquid staking solutions for BNB. Through robust offerings such as liquidity staking and CDP mechanisms, Lista DAO aims to empower users with efficient and secure financial tools.

Vision

Our long-term vision for Lista DAO is to establish it as a cornerstone of the DeFi ecosystem, fostering widespread adoption of our products. We prioritize continuous development, consistently innovating and introducing new features and services to meet the evolving needs of our users. Transparency is foundational to our operations, ensuring that all processes and decisions are transparent and accessible to the community. Lista DAO upholds the highest security standards, implementing comprehensive measures and conducting regular audits to uphold the integrity and safety of our platform and user funds. For more detailed information, you can view our audits here.

Core features

Lending

Launched in April 2025, Lista Lending ↗ grew into one of the largest lending markets on BNB Chain within six months. With dozens of markets and lending vaults available, Lista Lending offers first-party vaults that maximize your assets efficiency on the BNB Chain while allowing permissionless vault creation via its smart contracts from third parties. The latest chapter in Lista Lending is Lista Credit, .

Smart Lending & Swap

Smart Lending is Lista's next generation lending solution where collaterals are deposited into liquidity pools at Lista's DEX, Smart Swap. This opens up an entirely new income stream - trading fees. If you deposit BNB/slisBNB into Smart Lending as liquid provision, you will be able to borrow USD1 or BNB against it, while earning trading fees from BNB/slisBNB trading activities on Smart Swap at the same time.

Collateral Debt Position (CDP)

Modelled after MakerDAO, our CDP system allows users to lock a variety of collateral and mint stablecoins (lisUSD) against it, providing a secure way to leverage assets.

Liquid staking solution

Inspired by Lido DAO, our liquidity staking mechanism allows users to stake their BNB, earn rewards, and maintain their liquidity at the same time. This enhances overall liquidity within the DeFi ecosystem while ensuring flexibility and accessibility for users.

Our tokens

LISTA

LISTA is our governance token, empowering holders with voting rights and a say in the future direction of the platform.

lisUSD

lisUSD is a stablecoin minted through our CDP mechanism, maintaining a stable value pegged to the US dollar.

slisBNB

slisBNB is Lista DAO's liquid staking token, representing staked BNB and allowing users to earn rewards while maintaining liquidity.
