LitecoinToken Whitepaper

Litecoin Token (LTK) is a digital currency. It uses peer-to-peer technology to operate with no central authority or banks; managing transactions are carried out collectively by the network. There is no central control over the token. Litecoin Token is open source, community driven, decentralized. Developers are all volunteers.

Litecoin Token is working towards mass-adoption of the use of the currency in real-life applications. From encouraging local businesses to accept Litecoin Token as a method of payment, we are also looking to implement our currency into many already heavily used e-commerce scripts. And on the user level being able to share money, wire money, or just send a gift to a friend, LTK will make this possible!

Safe And Secure
Being an ERC-20 token allows us the safety and security of the Ethereum blockchain. Transactions are secure. Guaranteed.

Decentralized Currency
LTK is a peer-to-peer, secure platform with an average transaction time of 24 seconds!

Secure Wallets
There will be multiple native LTK official wallets to store your tokens. 3rd party wallets are also a great option.

Mass Adoption
Mass adoption is the key to LTK. We airdropped almost the entire supply so that it could become the token of the community.
