Welcome to Main St

Main Street delivers institutional-grade delta-neutral yield strategies through a multi-token system:

1. msUSD (The stablecoin always redeemable 1:1 for USDC)
2. msY (The first strategy token) — Yield generated through options box spreads.

Core Advantages

- First-Mover Advantage: Pioneer in democratizing the options box spread strategy through a stablecoin, delivering institutional-grade delta-neutral yield previously unavailable in DeFi
- Segregated risk via Multi-Token Yield System: Hold msUSD which is 1:1 backed by USDC or stake to receive msY, which accrues returns from the options box spread.
- Institutional Strategies: Access sophisticated delta-neutral trading techniques previously reserved for hedge funds
- Chain Flexibility: Seamlessly bridge between networks using LayerZero technology
- Infrastructure Layer: Built as a foundation for the options box spread strategy across DeFi

Getting Started

1. **Explore the Documentation**: Learn how our Multi token system works and the strategies that generate yield.
2. **Complete KYC**: Register as a verified user to mint or redeem msUSD directly

Archived copy · cryp2nova.com

3. **Obtain msUSD:** Mint with USDC or purchase on supported exchanges

Stake for Yield: Stake your msUSD to receive msY and begin earning yield
