MIL Token Whitepaper

Millionero.com - The Why Behind $MIL

Crypto trading should feel simple, safe, and genuinely empowering. Since 2021, Millionero has grown as a centralized exchange by sailing over one thing: a smooth, simple and secure experience for beginners finding their feet and experienced traders pushing their edge. We listened, shipped, refined, and built a community that trades, learns, and levels up together.

That same community has been asking for a native token to unlock the best of Millionero – seamless utility across features, deeper rewards for loyalty, and a common fabric that ties the whole experience together. $MIL is that fabric. It is the key that makes our ecosystem more useful, more rewarding, and more fun.

Trust is our first principle. Millionero keeps customer assets completely segregated from company funds and never uses customer funds for any purpose. Period. We built our systems, policies, and controls around that commitment because safety isn't a feature, it's the baseline for everything we do.

$MIL isn't about buzzwords. It's a simple promise to better access, better alignment, and better experience across the Millionero platform today and as we expand into new products that reduce friction and increase opportunity for our community.

Archived copy · cryp2nova.com

We built Millionero for everyday traders who want simple tools without complexity and for pros who want reliability without compromise. $MIL is our next step – a token that is going to turn participation into possibility because when our community wins, Millionero wins.

Our Mission

Millionero features an order book system, and enables users to buy, sell, and trade Bitcoin, Ethereum, and other crypto assets.

At Millionero we aim to become the most reliable crypto exchange for beginners by targeting individuals who may not necessarily have experience, offering simple and accessible crypto trading to all.

Millionero aims to democratize the crypto trading experience, making it accessible to everyone from beginners to expert traders. The platform's primary goal is to provide a user-friendly interface (UI/UX) that simplifies the trading process, making it intuitive for users of all experience levels.

Moreover, the project also aims to attract new users, including professional traders, into the crypto market. These professionals aim to be active participants but are also encouraged through incentives to share their knowledge and trading strategies.

Throughout its development, Millionero’s ultimate ambition is to acquire 1 million new users and ensure active participation within its ecosystem. Millionero has successfully achieved its 2025 user target ahead of schedule, now counting more than 50,000 active users. This growth is expected to be driven by partnership deals. In the mid term, the objective is to reach 150K users by the end of 2026 and 500K by the end of 2027. In the long term, Millionero aims to achieve 750K users by the end of 2028 and 1 million by the end of 2029.

Our Services

The Millionero platform offers a diverse range of innovative features.

Firstly, the spot trading default setup on Millionero allows users to trade efficiently and manage larger positions by accessing deep market liquidity and fast order execution, ensuring minimal slippage and greater control over their trades.

Additionally, the Perpetuals MAX feature enables users to enhance their buying power and maximise opportunities by using their holding crypto asset as collateral. It uses dynamic, portfolio-based margin in which only the minimum funds needed to support your open positions are reserved/ locked, and it adjusts in real time with your overall risk, so the rest of your funds remain available while safety checks stay in place.

Archived copy · cryp2nova.com

For risk management, Millionero provides a hedging feature on perpetuals that lets users manage risk by potentially hedging negative positions. This offers an additional layer of strategy to their trading activities.

Moreover, Millionero introduces a copy trading feature, enabling users to mimic the trades of top performers. Users may mirror strategies within self-set limits and stop rules, with clear risk prompts and the ability to pause or exit at any time. This is useful for those with limited time and experience, as it allows them to enjoy the benefits from the trading decision of their chosen trader without constant oversight.

Millionero's Influencer Program offers members the opportunity to represent the brand through exclusive events, targeted promotions, and collaborative marketing initiatives. As brand ambassadors, participants can engage their networks more effectively and contribute to the platform's growth through strategic referral activities.

Our On-chain Activities

Millionero will be breaking the stereotypes and launching its native exchange token on the Solana blockchain.

Given that Millionero users will be conducting financial transactions and various regular actions within the platform, selecting the appropriate blockchain is crucial to protect both users and transactions involved in the project.

We chose Solana for its high throughput, low-latency finality, and mature tooling that suit real-time exchange UX and on-chain utility without changing our custody model.

Moreover, the large number of active projects and users on Solana attracts more developers and businesses, creating a network effect. Existing infrastructure, wallets, and exchanges provide comprehensive support for Solana-based assets.

Solana ensures that Millionero will benefit from a secure, scalable, and innovative platform, supported by a robust developer community and a rich ecosystem of products.

Millionero Systems

$MIL Token

Millionero has implemented a single-token model using its token, $MIL. This strategy is designed to simplify the platform's operations and enhance the overall user experience.

Furthermore, in developing the economic model of the ecosystem, the decision to adopt a deflationary economy with a fixed total supply strategically aligns with user preferences and the project’s long-term goals.

The total supply of 5 billion $MIL tokens will allow the platform to meet its usage needs in both the short and long term.

Search

Token Name	MIL
Token Symbol	MIL
Chain	Solana
Issue Price	$0.007
Contract Address	6Tk3uHQpLDtd4Qob5fduLjfhXxAasWgvdo8hYeswxMiL
Circulating Supply	1,214,500,000
Total Supply	5,000,000,000
Launch Date	15 January 2026

Archived copy · cryp2nova.com

To promote a deflationary economy, Millionero relies on increasing its number of token holders through the various utilities and growing adoption of users over time. Additionally, will implement a buyback and burn mechanism to support this deflationary approach. Buybacks, when executed, will follow pre-approved rules tied to ecosystem health and compliance checks, with burns recorded on-chain. Millionero implements a buyback-and-burn mechanism for the $MIL token, using platform-generated revenue to repurchase tokens from the market and permanently remove them from circulation. This deflationary approach helps reduce overall supply, aiming to enhance long-term value and align incentives with the platform’s growth.

Token utility

The $MIL token serves as the backbone of the Millionero ecosystem, facilitating all transactions within the platform. This token offers various utilities that enable users to perform diverse actions throughout the ecosystem.

Pre-Launch Phase (Reward Accrual)

Millionero will issue MIL reward points to users based on:

- Trading volume in perpetual markets
- Referrals who actively trade
- Participation in promotions and challenges

These reward points will be non-transferable, off-chain, and not listed on any market. Users will see their accrued MIL reward points in their dashboards with a note that the tokens will only become usable upon public launch.

All pre-launch MIL reward points will be converted into real MIL tokens and credited to users' wallets and tokens will be tradeable.

Archived copy · cryp2nova.com

Means of payment

The $MIL serves as a means of payment for costs and fees on the platform, facilitating seamless transactions.

Lower trading fees

$MIL is used to manage fees, and as a result, holding and using the token can reduce certain trading fees and unlock better fee tiers. The benefit scales with participation and clear eligibility rules, so users who engage more with the ecosystem can pay less without coupons, gimmicks, or hidden conditions.

Deflationary Buyback-and-Burn Mechanism

To support sustainable value appreciation, the platform will implement a deflationary buyback-and-burn mechanism. This strategy uses platform-generated revenue to repurchase $MIL tokens from the open market and permanently remove them from circulation. By reducing the total token supply over time, it creates deflationary pressure that supports a favorable supply-demand balance. In parallel, long-term unlock and vesting schedules will be established to manage token emissions responsibly and ensure alignment with the project’s long-term objectives.

CRYP2NOVA

AI Assisted Trading

MIL holders will gain access to premium trading tools such as AI assisted trading. AI highlights risks, scenarios, and guardrails, along with trading guides in terms of leverage and market analysis.

Archived copy · cryp2nova.com

Staking model

The MIL token staking model has undergone extensive modeling, ensuring that the forecasted Annual Percentage Yield (APY) is robust enough to support the staking of all released tokens in the first three years. The design was stress-tested for sustainability, disciplined emissions, and aligned incentives across varied conditions prioritizing stability over headline yield.

Millionero's staking program details will be disclosed at the launch of this feature offering decent APY keeping the emission rate lower and stable for the token ecosystem to maintain the price at the same time.

Launchpool

Millionero Launchpool allows users to stake their MIL tokens and farm new project tokens before they’re listed anywhere.

By staking MIL for a specific period, users will be able to earn the new project’s tokens as rewards, giving them early exposure to promising launches without any cost.

Launchpad

The platform will not be just a trading platform, it will also offer its own launchpad. As a centralized exchange, our exchange will enable Initial Exchange Offering (IEO).

This will enable us to provide numerous strategic benefits, enhancing its value proposition and promoting the growth of its ecosystem and network.

By creating its own launchpad, Millionero aims to offer users the opportunity to participate in the early launches of new tokens. This will allow people to access new tokens at competitive prices before listing on centralized exchange, expanding the ecosystem and fostering user engagement and community growth.

Archived copy · cryp2nova.com

The platform will reserve the launchpad exclusively for its token holders, as holding $MIL will be the key to accessing the launchpad. During a launch period, participants will need to stake tokens, and payment for allocations will be made using the $MIL token. This strategy aims to reward participants and promote staking.

Participation in P2P Marketplace

Targeting Asia, the Middle East, Europe, and Latin America, Our platform makes it easier for locals to buy and sell crypto. Participants in the marketplace will create profiles, offer services, and facilitate the exchange of crypto for fiat and vice-versa. They will be required to deposit (lock) $MIL tokens as proof of trust.

By requiring participants to lock $MIL tokens as a form of collateral, the system aims to foster trust among users and reduce the likelihood of fraudulent activities. This deposit in $MIL serves as collateral and is "locked" in a smart contract for the duration of the user's participation in the marketplace. During this period, users can offer services, such as buying and selling crypto for fiat or vice-versa.
Millionero will also leverage its existing connections with other exchanges to expand this network.

Millionero Crypto Card

The Millionero Crypto Card will give users a simple and practical way to use their crypto in everyday life by getting additional cashbacks in MIL. By paying with the card, holders will be able to access discounts on selected purchases and partnered services. The card is designed to be easy to use, linking directly with the platform wallet, so that spending crypto becomes seamless. This creates a clear real-world use for the token while offering convenience and savings to its holders in cashbacks and discounts.

Archived copy · cryp2nova.com

Millionero DEX Wallet

The Millionero DEX Wallet will provide a simple and secure way for users to store and manage digital assets while connecting directly with decentralized applications. It will support token swaps, transfers, and interaction with DeFi protocols. By integrating with $MIL, the wallet will offer benefits such as reduced transaction costs and a smoother connection between centralized and decentralized trading.

Millionero DEX Perpetuals on Solana

Millionero will also expand into decentralized perpetual trading through Solana. This system will enable users to trade perpetual contracts on-chain with faster transactions and lower fees, while still benefiting from the broader Millionero ecosystem. $MIL will serve as the central token within this framework, supporting fee discounts and staking incentives.. Together, the DEX Wallet and Solana-based perpetuals broaden Millionero's reach and provide users with more flexible trading options. Millionero is testing a new way to use collateral on DEX perpetuals that aims to make risk easier to understand and losses less sudden. It will use clear margin rules, simple limits, and optional tools to hedge when markets swing. Safety checks will be built-in so behavior is predictable, not surprising.

CRYP2NOVA

Millionero Blockchain

Millionero is exploring a research track toward a proprietary chain aimed at practical ecosystem gains—smoother settlement flows, compliance-aware controls, and native $MIL utility across products.

CRYP2NOVA

Community & Rewards

15% will be allocated to the rewards community, in addition to those allocated in other categories such as staking. These rewards are designed to recognize and encourage participation. They include exclusive benefits, access to premium features such as advanced trading tools and analytics, rewards for trading experts to encourage the sharing of their knowledge and strategies, and transaction discounts. The objective is to attract a wider target audience, increase the popularity of Millionero, and promote engagement with the platform. This strategy aims to foster a strong sense of community around our platform.

Archived copy · cryp2nova.com

20% of the tokens will be released at TGE, followed by a 2% monthly unlock. Rewards will continue to be distributed in line with the rewards plan, as user incentives are an ongoing process.

Treasury, Development & Research

To ensure the long-term financial stability of Millionero, the treasury will maintain a reserve fund for ongoing development, finance community initiatives, future airdrops, marketing, and operations. An initial allocation of 11% is made at the beginning, as the treasury will be replenished with the value captured through revenue share and transaction fees, as well as from the buy-back of $MIL tokens.

10% of the tokens will be released at TGE, followed by a 5-month cliff and a 2% monthly release schedule thereafter. This approach ensures a strategic reserve while maintaining flexibility as the project navigates future challenges.

Team

The token allocation for the team will be set at 9%, rewarding their efforts in developing a high-quality platform and aligning their interests with the long-term success of the project. Allocating an appropriate percentage ensures that the team remains motivated and is fairly rewarded for their contributions.

1% of tokens will be unlocked at TGE, followed by a 12-month cliff and a 3% monthly release schedule thereafter. This structure demonstrates the team's commitment over time and ensures that the platform is focused on performance in the coming years, not just the upcoming months. This also ensures that the team’s interests are aligned with the long-term goals of the project.

Archived copy · cryp2nova.com

Marketing

18% of $MIL tokens will be allocated to marketing throughout the first few years. Marketing is crucial for increasing awareness of the project, attracting a broader target audience, and fostering a sense of community around Millionero. This effort will enhance visibility and expand the audience, which is essential for the success of our platform.

10% of tokens will be unlocked at TGE, with the remainder released at a steady 2% per month, ensuring long-term visibility and sustained outreach.

Partners

Partnerships with football clubs, MMA fighters, and third-party services will be established to enhance visibility and broaden the audience. Partners play a crucial role in attracting a broader audience to the exchange and in expanding its user base.

To remunerate their contributions, 5% of the total token supply is allocated to partners. 16% of this allocation will unlock at TGE, providing immediate incentives for early contributors. The remaining will be subject to a 6-month cliff, followed by monthly releases of 2% of the total partner allocation.

Stake + Farm (10%)

To actively engage the community in the platform’s activities and encourage their contribution to the platform’s liquidity and stability, 10% of the tokens will be allocated to reward staking participants.

0% unlock at TGE, followed by a 2-month cliff, after which 2.5% of the staking allocation will be released each month. This structure ensures sustainable reward distribution, incentivizing long-term participation rather than short-term farming.

Roadmap

Q1 2026

- MIL Token Launch.
- Fee Discounts by holding MIL tokens.
- All pre-launch MIL reward points will be converted into real MIL tokens and credited to users' wallets
- Buy back and burn protocol.

Q2 2026

- AI Trading Assistant Integration.
- Staking & Yield Programs — Allow users to stake MIL for rewards.
- AI Trading Bots.

Q3 2026

- Launchpool Tier System — Access to projects token farming based on MIL staking.
- Social Games Section.
- Gift Cards and vouchers with MIL.

Q4 2026

- Millionero Crypto Cards and earning cashback in $MIL.
- Launchpad Tier System — Access to project allocations based on MIL holdings/staking to purchase.
- Introduction of the P2P Marketplace for the exchange of crypto with local currency with integration to MIL.

Archived copy · cryp2nova.com

Long-term Utilities

- NFTs integration
- Millionero Blockchain
- Millionero DEX Wallet
- Millionero DEX Perpetuals.
