

MMOCoin

A cryptocurrency for gamers, by gamers.

White Paper

v. 1.0

Introduction

MMOCoin is the newest addition to the growing synergy between cryptocurrency and online gamers. As technology continues to innovate and national borders are reduced to thin lines on a map, online gamers require a fast and user-friendly way to share their resources. Built on top of the MMOPro community that boasts a user count of over 250,000, MMOCoin will quickly become the preferred choice for gamers to trade in an increasingly more globalized and digital world.

History

When video games made their introduction to the world in the 1960s, the world was captivated by the ability to interact, to control the lines on a black and white screen. It was the first time we could build a narrative, no matter how derivative, in real time. Interactive gameplay was born. The industry exploded with big box arcade games, home gaming consoles, and handheld gaming devices.

And then, the internet changed everything. Suddenly gamers could interact with each other. What was once a solo venture or with a friend in your living room, quickly became a world-wide sensation. As the speed of the internet increased, innovation took over and brought us all time greats like StarCraft, RuneScape, World of Warcraft, League of Legends, just to name a few.

CRYP2NOVA

Cryptocurrency was the next phase of innovation. A currency that no longer was inhibited by national borders. A store of value that could be used as a means of acquiring your every need without trying to figure out how to pay someone in Euros when you only have US Dollars. World-wide gamers needed a universal way to trade resources to advance their gaming experience. It was a match made in heaven.

Problem Statement

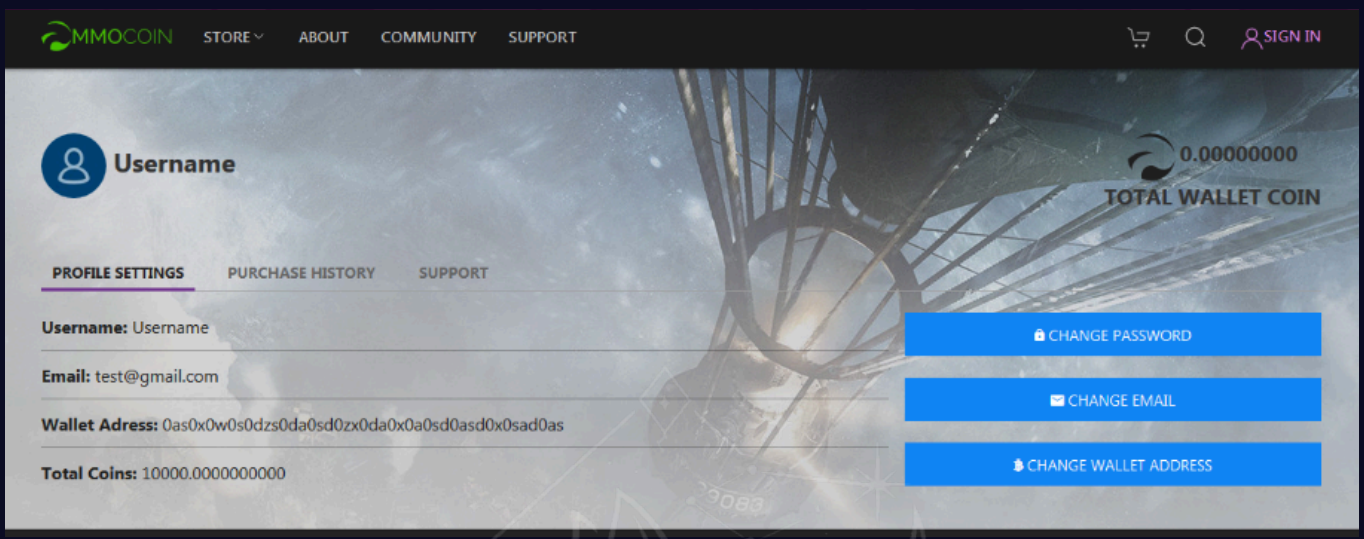

In a world where there are over 2,500 cryptocurrencies in existence, it's becoming harder for gamers to exchange digital currency for the resources they seek. Without a dedicated currency for gamers, they are left to use investor-centric currencies that are subject to manipulation.

And Currently, there isn't a cryptocurrency dedicated to gamers, that is actually used by gamers. Most of these digital currencies are owned primarily by financial investors who have very little use or care for the purpose of the product.

Additionally, many of these "gamer coins" are distributed and managed by non-gamers. It's like if a professional chef were to give you medical advise. They may know what they're talking about, but wouldn't you rather hear it from someone who actually knows? Currently, there is very little personal care and maintenance from those on the front lines on online gaming.

Solution Statement

MM0Pro was founded in 2008, a year before Bitcoin made its introduction to the world. Founded and maintained by passionate, committed gamers who were looking for a way to bring other gamers together to share knowledge and resources to improve everyone's gaming experience.

These same founders have recognized the power of cryptocurrency and decided to create and integrate MM0Coin into their already 250,000 strong user base. Hiring some of the smartest minds, MM0Pro has built a cryptocurrency by gamers, for gamers.

With MM0Coin, gamers will be able to buy, sell, and trade almost anything they need for their gaming experience. With a single currency, dedicated to gamers, users will be able to quickly and securely acquire exactly what they need for their next mission or quest.

MMOPro Marketplace

For years, MMOPro has operated off of a rudimentary forum structure that allows users to search out each other and trade. This process has served the community well for almost 10 years. However, with the advancement of web development and cryptocurrency, MMOPro knew they needed to remodel their process to keep their users coming back. Enter the MMOPro Marketplace. A fully developed user experience that could rival the likes of Ebay.

The easy to use interface will make finding exactly what gamers need easier than ever before. Broken down by game, there are categories and sub-categories to locate exactly what each user is in need of. With the creation of MMOCoin, the MMOPro Marketplace will have a dedicated payment option that users can use. With a built-in Escrow Service, the chances a user is scammed out of their purchase is virtually zero. This is the next step in customer experience gamers have been looking for.

Features

MMOCoin was written in the Script Algorithm. Created as a Proof-of-Work (Pow) and Proof-of-Stake (PoS) hybrid. The release of MMOCoins into circulation are first mined during the initial 2,000 blocks (see right).

Block Phases	Value
1-1000	100,000 MMO
1001-2000	1 MMO
2001+	Tiered PoS
Specification	**Value**
Block Time	90 Seconds
Min. Stake Age	4 Hours
Max. Stake Age	2 Months

After Block 2,000, MMOCoins unique Tiered Staking takes over. This structure ensures a slow, steady release of coins into circulation. It is set up to reward those who have chosen to take on the highest ownership commitment (or risk) with the highest rewards.

Masternodes were an option that was considered by the team. However, staying true to the vision of MMOCoin, maintaining maximum liquidity was important to foster a industry-specific utility coin.
