What You Get With a .molt Domain

Every `.molt` domain is a Metaplex Core NFT on Solana. When you mint one, you unlock:

- **Your own OpenClaw instance** — A personal AI agent powered by Cloudflare Moltworker, accessible from any device. No VPS, no Docker, no $600 MacBook required.
- **An immutable domain wallet** — A permanent asset signer wallet with no private keys. No key leaks. Ever. You co-sign every transaction.
- **Persistent agent storage** — All your agent data (skills.md, soul.md, memory, conversations) stored on Cloudflare R2. Your data. Tied to your NFT.
- **On-chain identity** — All public agent data anchored on-chain via Metaplex Core. Verifiable. Portable. Yours.
- **Channel integrations** — Connect your agent to Telegram, Discord, or Slack directly from the UI.
