MOMO FULLSTACK · SOLANA-NATIVE

Describe what you want. MOMO ships the app.

Frontend, backend, database, authentication. All generated and deployed to a live URL in minutes. Solana-native by default. No code, no setup, no infrastructure choices.

Open MOMO → Quickstart

Get started in 60 seconds

1. Sign in at momo.vu
2. Type what you want to build
3. Watch MOMO ship it. About 5 minutes later you have a live URL

For a full walkthrough, see Quickstart. To learn how to write prompts that get you what you want, see Prompting. For Solana-specific builds, see Crypto.

CRYP2NOVA

What MOMO can build today

Web apps

React frontends with Tailwind, paired with Postgres-backed APIs and authenticated user flows.

Games

2D Canvas games and 3D web games (React Three Fiber, Rapier physics).

Landing pages

Editorial layouts, mobile-responsive, ready to share.

Dashboards & SaaS

Internal tools, admin panels, subscription apps.

Solana apps NATIVE

Wallet portfolios, Jupiter swaps, pump.fun trackers, liquid staking, NFT galleries. Helius RPC + DAS baked in.

Crypto docs →

Onchain integrations NATIVE

Sign-In With Solana, Anchor program reads, Helius webhooks, NFT marketplaces. EVM (Ethereum, Base, Arbitrum) when you ask.

Crypto docs →

What's coming

- Custom domains for the apps you build
- Pay-as-you-go credits (no subscriptions)
- EVM smart contract deploys (ERC-20, ERC-721, Sepolia / Base / Arbitrum)
- pump.fun launch integration (add a token launch to any app)
- Mobile builds (iOS, Android)
- Skill marketplace for builders to share custom integrations

See the full roadmap. We ship updates every week.
