NeuroWeb Network

Copy

"The way you train that (AI) system will have to be crowdsourced ... if you want it to be a repository of all human knowledge, all humans need to contribute to it." — Yann LeCun

NeuroWeb Network is a decentralized artificial intelligence (AI) blockchain designed to incentivize knowledge creation, connectivity, and sharing through **knowledge mining**. Its utility token NEURO is designed to fuel the AI knowledge economy, rewarding relevant knowledge contributions to the **OriginTrail Decentralized Knowledge Graph (DKG)**.

NeuroWeb builds on its predecessor — the OriginTrail Parachain — which was transformed into NeuroWeb via a community Governance vote on OriginTrail Parachain in December 2023.

NeuroWeb is a permissionless, EVM-enabled blockchain secured by Polkadot validators.
