What is Novastro?

Novastro is building a modular ledger layer for real-world assets (RWAs), anchoring issuance on Ethereum’s secure ledger while enabling high-performance trading across Arbitrum, Sui, and Solana networks. Designed as the ultimate bridge for RWA interoperability, Novastro’s multi-ledger architecture ensures universal access, eliminating silos and maximizing DeFi composability, surpassing single-chain constraints.

Powered by the $XNL token, Novastro drives smart SPV-based tokenization, on-chain yield through stablecoins, and AI-optimized asset strategies. With automated compliance, decentralized sequencing, and comprehensive service provider integration, Novastro establishes the open, scalable ledger standard for global RWA markets.
