RZOASIS

White Paper

RZOASIS is a multi-planet digital ecosystem designed as a scalable galaxy of interconnected Web3 worlds. It introduces a unified token economy powered by the OASIS token, operating as the primary energy source of this galaxy.

RZOASIS integrates gaming, reputation systems, asset creation, decentralized financial tools, and immersive world-building into a single expanding architecture. Each planet functions as an independent module while remaining connected through a shared cosmic infrastructure shaped by the central light source, RZ.
