👋Welcome To OpenEden

Product Documentation

About

OpenEden offers 24/7, on-chain access to tokenized US Treasury securities for Web3 CFOs, DAO treasury managers, and buy-side institutional investors seeking low-risk, highly liquid crypto cash management solutions.

Our tokenized Treasury fund (TBILL) is rated "AA+" by S&P Global, and it was the world's first tokenized real-world asset (RWA) product to receive an investment-grade "A" rating from Moody's. Since launching in early 2023, OpenEden has already become the largest issuer of tokenized US Treasuries in Asia and Europe.

As part of our end-to-end tokenization stack, OpenEden is directly involved through its licensed investment management entity, which manages its BVI-registered professional fund, which issues the $TBILL tokens and custodies the underlying assets with licensed third-party custodians.

Mission

OpenEden's mission is to bring real-world assets to DeFi to unlock trillions of dollars in value. We believe internet-native money will make real-world assets accessible to everyone, creating a more inclusive, permissionless, and free-flowing economy.
