An Introduction to PERQ Pools

PERQ brings Supercharged Launchpools to Ethereum, Base & Sonic.

The concept is simple. Stake your idle Stablecoins (USDT, USDC, DAI, sUDSC.e) or your wETH/wS/wBTC in our PERQ Pools to earn your favorite tokens of today or tomorrow.

PERQ offers users pools where they exchange their yield for unlaunched tokens, which will be released on TGE without any locks. Similarly, the user's stake is never locked and can always be withdrawn.

> *The most important thing you do with your crypto is what you do with your crypto when you are not doing anything with your crypto.*

Types of Pools you may see on PERQ:

Archived copy · cryp2nova.com

Launchpools: Tokens that are close to TGE. Users can get access to the most popular launches simply by staking stablecoins, wETH, wBTC, or wS. Stake and receive your tokens on TGE.

Fair Launches: Some of our partners decide to solely launch on PERQ. This means that PERQ is the exclusive avenue of getting any tokens, similar to how the MorpheusAI Fair Launch ↗ worked.

Pods: Bullish on certain ecosystems? Pods let you delegate your yield towards multiple projects in that ecosystem, via our Economic Restaking ↗ Layer.

Metapools (soon): Interested in a certain narrative? Stake in a Metapool and gain free exposure and airdrops fitting that narrative. Set and forget pools that get rotating exposure to our Launchpools depending on your preference.

And that's it. PERQ lets you get your hands on exclusive, hyped tokens before anyone else, without spending a dime.
