CRYP2NOVA

1．INTRODUCTION

PLANET is used as an inter-exchange settlement currency. It is a currency that has the same price fluctuation as the major currency such as bitcoin.
The initial stage will be built with ERC 20 token, but in the future we will use new mechanisms to implement token that combine centralized benefits with decentralized benefits.

As a disadvantage of crypto currency, it is also a reality that money laundering and theft damage are common. We aim to eliminate anonymity and to quickly respond to money laundering and theft.

1．ABOUT PLANET

PLANET token is token that are airdropped by the MOGU token holder held by IDEVEX. This token aims to be a token that can be traded not only on the IDEVEX Exchange but also on exchanges around the world, and plays an important role as an airdrop token to increase value and liquidity.

※ MOGU token is a token developed and operated by MOGUTECHNOLOGIES, and is distributed as a token aiming at Internet revolution through MOGU router. Through the IDEVEX Exchange, we aim for commercial use as a token that can actually be used.

・PLANET TOKEN ISSUE

PLANET is distributed to customers as a fee for trading commissions generated on the IDEVEX Exchange (Inter-Exchange Arbitrage / Exchange Trading Commission, etc.).
The PLANET token will be one of the closing currencies on the IDEVEX exchange.
By having PLANET, users can enjoy various benefits.

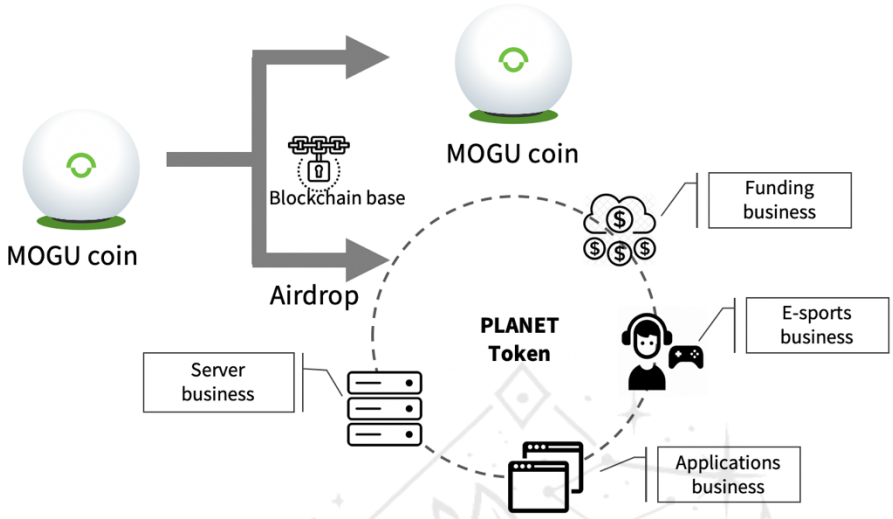

Name: PLANET
Symbol: PLA
Standard: ERC 20
Total issue number: 5,000,000,000 PLANET
※ The total number of issues is set at 5 billion, and it will not increase.

2．PLANET TOKEN MISSION

The total number of PLANET tokens issued is 5 billion tokens. The price as of today (2019/06/20) is based on

0.8USD. PLANET Token aims at the original token from Japan.

PLANET Token consists of four major businesses: 【Blockchain Fund Business】 【e-sports Business】 【Blockchain Server Business】 【Blockchain Application Business】

• PLANET FOUR MAJOR BUSINESS

(1) Blockchain Fund Business

PLANET Token operates a dividend-type blockchain fund business. As a blockchain fund, it is initially used in BTC's liquidity supply business, where arbitrage is conducted within IDEVEX.

We can expect about 1% profit per arbitrage. For example, for $ 18,000 BTC, there is a $ 80 commission to buy and a $ 80 commission to sell, and the exchange uses $ 80 of the $ 160 commission to purchase PLANET tokens. The remaining $ 80 will be exchange revenue and return to the blockchain fund business.

IDEVEX is a startup exchange with a turnover of around 100 BTC a day on many days. It is not far from now that the 10,000-20,000 BTC trade will be executed. By using proprietary trading for volumes, you can provide huge revenue opportunities to your users and lead to the rise of PLANET tokens.

In addition, we will invest in blockchain companies and general companies in the early stage. It is a method to pursue return by raising the stock price of a company.

(2) e-sports Business

[Asobibar281] I run asobibar281.com in Takamatsu, Kagawa Prefecture. We will focus on providing the value of "playing" throughout Japan, and will manage businesses that make computer games and VR more accessible. In the e-Sports business, PLANET tokens are recognized by many people because they are used as prize tickets for PLANET tokens and as tickets for participation.

(3) BLOCKCHAIN SERVER BUSINESS

Blockchains have the ability to store text and metadata that will be permanently stored. In order to operate the home page conventionally, it was necessary to purchase a rental server and operate the rental server.
The block chain server business operates a content distribution business that can not be tampered with by third parties. We will try to use as a distributed storage by providing an interactive homepage and SDK kit by utilizing third party authentication by blockchain and dynamic script (JS) from HTML accessible by conventional HTTP communication.

(4) BLOCKCHAIN APPLICATION BUSINESS

The blockchain application business enables airline tickets and hotel reservations through IDEVEX. IDEVEX plans to secure the liquidity of the consumed PLANET tokens and to make the bookings of airlines and hotels around the world available in the exchange as a mechanism for the tokens themselves to make a profit. As OTA (Online Travel Agency), we carry out a model to provide services to PLANET token holders and to make a profit.

3．PLANETTOKEN QUOLITY

PLANET tokens are tokens that are distributed one-to-one to MOGU tokens. The MOGU token is a token operated by “MOGUTECHNOLOGIES”, and is distributed as a token for the Internet revolution through the MOGU router. The PLANET token is a token for implementing Japan-specific customization and planning while having the same function as the MOGU token.

• PLANET TOKEN STRENGTH

The value of tokens is increased by circulation. Therefore, the crypto currency called exchange token tends to increase in value because a certain amount of circulation amount is secured.
Furthermore, since PLANET is used as the settlement currency on the platform that the IDEVEX project will develop, it can be expected to be a large distribution beyond the traditional exchange token framework. By creating a place and an opportunity where tokens can be used, we will ensure the recyclability and the economic zone, and increase their value.

• PLANET HOLDERS BENEFIT

50% of commissions from arbitrage transactions at IDEVEX will be used to purchase PLANET tokens. By owning PLANET, you can gain both income and capital gains. BTC · ETH · USDT (additional from time to time) is planned for the currencies to be reduced.

* As an example of revenue distribution, if the IDEVEX revenue is 100 BTC + 400 ETH, the dividend for the user who owns 50% of the distributed volume will be 50 BTC + 200 ETH. Capital gains granted PLANET can be sold within IDEVEX to gain a gain.

In order to provide benefits to PLANET holders, we will develop measures to increase the value of PLANET from a long-term perspective. Part of PLANET's revenue is repurchased (depreciated after repurchasing), liquidity as settlement currency for IDEVEX project-related platforms, and IDEVEX repurchased as part of project-related platform revenue. It is expected that the value will rise because the total distribution volume will be reduced by the amortization of purchases after establishing the economic zone and securing liquidity in the entire IDEVEX project as well as the exchange.

• TRADING BONUS

The total amount of PLANET issued by transaction mining is 5 billion PLA, and the community fee accounts for 50% of the total. Trade mining is provided only to circulating PLA holders, and is distributed to the community as mining dividends through the “trade commission mining” mechanism, and the remainder is distributed to teams (R & D, System & Security), PLANET funds, and Investment funds.

Transaction fees are used by the PLANET Fund to purchase PLANET from the market on an irregular basis. The fund's dividend is used to repurchase PLANET from the market on an irregular basis and is depreciated after repurchase. PLANET token assets in PLANET fund accounts are locked 100% and do not circulate in the market.

Research and Development Exchange operations and blockchain technology research and development expenses When PLA is mined, the team account will be paid 7.5% of the total PLANET.
System and Security System Development / Maintenance, Security Management / Enhancement Cost When PLANET is mined, the team account will be paid 7.5% of the entire PLANET. The fund's dividends will be used by the IDEVEX project investment team to make occasional investments in related projects.
Revenue from that will be distributed to PLANET holders.
Expenses used for community project PR and marketing The costs for the IDEVEX project community are 500 million PLANET, mainly for events and PR and marketing expenses to expand the project.

4 . IDEVEX EXCHANGE QUOLITY

Based in Hong Kong, the IDEVEX Exchange is already in use by users around the world. It is recognized as a safe exchange because of its anti-cash function and strict identity verification. For example, strict identity verification at the time of withdrawal process prevents threats from hackers.

• STRUCTURE OF LIQUIDITY

The IDEVEX Exchange is constantly supplying liquidity such as Korean won denominated BTC and Japanese yen denominated BTC on the basis of the dollar which is the legal currency. This enables arbitrage for professional traders on one exchange. PLANET tokens are supplied with liquidity daily by purchasing 50% of PLANET tokens obtained as transaction fees within the IDEVEX exchange. Generally, the higher the BTC price is, the higher the commission for the arbitrage transaction is. Therefore, the value of the PLANET token also increases as the BTC price increases.

• ADVANCED SECURITY LEVEL

Security is a top priority because of the nature of the exchange, where you deposit your assets. In IDEVEX, digital assets are protected with multisig,
Without the approval of multiple administrators, it is not possible to transfer crypto currency. 95% of digital assets that do not receive remittances are stored in a cold wallet, and are separated and managed in an offline environment disconnected from the Internet. We also work with cyber security companies with experience in major financial institutions and crypto currency exchanges to set up transaction history monitoring and defense in depth with next-generation firewalls.
In order to respond to evolving hacking on a daily basis, regular external security audits are conducted to investigate problems and accumulate know-how.

5．IDEVEX MAIN FUNCTION

◆Crypto currency trading
It has a simple UI/UX design and high-speed transaction processing, so anyone can easily trade in crypto currency. With regard to transaction fees, we provide services at 0.15% to 0.5%, the lowest level in the industry.

◆OTC（OVER THE COUNTER）
OTC (OVER THE COUNTER) means that the seller and the buyer directly trade without going through the board of the exchange. This is used mainly by large institutional investors, as it allows them to make bulk transactions smoothly without affecting the market price. OTC's market has grown tenfold in the past year, and the OTC transaction volume in 2018 has reached 2.6 trillion yen.
The introduction of OTC trading desks has already spread worldwide at major exchanges. In the past, due to the nature of trading directly between users, there have been cases in which trading risks have arisen, such as the other party not paying for a crypto currency or legal currency, or carrying away. Intervening with IDEVEX, the escrow function (* 1) secures the transaction credit, so even large-volume transactions can be completed safely and safely.
By differentiating services by lowering the amount and fee received compared to major exchanges, we aim to

provide services that allow more users to use OTC.

※１：Escrow function means third party escrow. This refers to a system in which a third party deposits money, certificates, goods, etc. delivered as compensation until the performance of the obligation is confirmed from one side to the other side of the contract between the two parties.

◆Transaction fee mining

IDEVEX uses “trade commission mining,” which is the trend of the exchange. By holding a PLANET token, you can gain both income and capital gains.

◆Collaboration with project related services

We will develop and collaborate with a wide variety of services across crypto currency exchanges, and will dramatically increase the acquisition of new users and the liquidity of unique tokens.

◆Gaming platform

The affinity between gaming and gambling and crypto currency and blockchain is very high, and about 80% of DAU in the dApps (Decentralized Applications) market is gaming related applications. In popular games, there are some that generate transaction volumes of several hundred million yen every day. PLANET actively cooperates with gaming and gambling projects that have large transaction volumes, and introduces its own token as a platform payment method.

6 . PLANET TOKEN • ROADMAP

2019 Q2

Work with airline reservation system

Cooperation with the IDEVEX Exchange and the EIRENEX Exchange

Launched arbitrage business using PLANET token

2019 Q3

Apply for listing on a major exchange

Launch of e-sports gaming project

2019 Q4

Launched nationwide development of e-sports complex

2020 Q1

PLANET tokens are available for payment

8．CONCLUSION

※ About this white paper

1. Involvement in token sale This white paper is for informational purposes only as mentioned above, and gives ownership to, ownership of, rights to property and management of shares and securities to IDEVEX or related companies. It is not a thing. In addition, the same applies to the case of acquiring a token, and it does not give the above rights. Please be aware of the following points when participating in a token sale, and participate at your own risk.

2. Guarantee of income and profit

There is no guarantee as to the numbers and earnings described in this white paper. It is the current plan that can be considered the maximum possible in maximizing profit, starting with the token owner, and constructing and operating PLANET. Be aware that the environment surrounding blockchains and crypto currencies is changing from day to day and may not be implemented as planned or may be changed to maximize profits. The way of using the collected funds is also the same. Please make sure that there is a good possibility that the way of using the plan can be constructed with the development in mind.

3. Risk of failure

Please be aware that there is a risk that the plan will fail in the event related to the project. However, we will concentrate on the development of PLANET so that we can make the most of our profits.

4. Warranty, Disclaimer

We do not guarantee the possession or possession of the acquired token. It is your responsibility to carry out the management method.
